Chapter 1

Virus Info Base

1.1 Jeff Butonic 3.00

Name : Jeff Butonic 3.00

Aliases : No Aliases

Clone : No Clones

Type/size : File/2916

Symptoms : Shows an alert

Discovered : 01-06-91

Way to infect: File infection

Rating : Less Dangerous

Kickstarts : 1.2/1.3/2.0 BUT: only DD-Disks !!!

Damage : No Damage

Removal : Delete file.

Comments : When you are starting the JeffV3.00 virus it first decodes itself with a eor-loop. Then it changes the Kick-Vectors and patches the DoIO()-Vector from the exec.library. The DoIO()-Vector is used to infect other disks. If you are inserting an unprotected disk, the virus scans the root-block of it (\$6E000 = only DD-Disks!!!) and tries to create the virusfile and to modify the startup-sequence. No DOS-functions are used (!!).

Sometimes the window-title change and the following messages will appear:

Ich brauch jetzt Alk'!
Bitte keinen Wodka!Stau auf Datenbus bei Speicherkilometer 128!

Mehr Buszyklen für den Prozessor!
Ein dreifach MITLEID für Atari ST!
©89 by BUTONIC
PC/XT: Spendenkonto 004...
Freiheit für den Tastaturprozessor!
C für Looser
Paula meint, Agnus sei zu dick.
Die CPU braucht etwas Schmieröl
C64 - jetzt mit Pampers im 3erPack
JEFF=ungefährlich+schützt vor Viren

Depending of \$DFF006 , the virus gives out an alert:

Hi.
JEFF's speaking here...
(w) by the genius BUTONIC.
V 3.00/9.2.89-Gen.00031
Greetings to *Hackmack*,*Atlantic*,
& Alex, Frank, Wolfram, Gerlach, Miguel, Klaus, Snoopy-Data!
