Chapter 1

Virus Info Base

1.1 LameBlame

Name : Lame Blame

Aliases : Taipan Lame Blanme

Type/Size : Boot/1024

Clones : Cheater Hi Jacker

Symptoms : No Symptoms

Discovered : 17-07-91

Way to infect: Boot infection

Rating : Harmless

Kickstarts : 1.2/1.3/2.0

Damage : Overwrites boot.

Removal : Install boot.

Comments : The LameBlame virus allocates CHIP-Memory for it's location. After Copying the virus into this AREA it patches the CoolCapture vector and the DoIO() to infect other disks.

The whole virusbootblock will be crypted by an byte depending of \$dff006 so you can't read any texts in the bootblock.

The virus isn't dangerous for HD-Users because it tests for the trackdisk.device. After every 8th Alert the virus gives out an ALERT:

"LameBlame! by Tai-Pan - Nimber of Copys:0002"

Click on this gadget to see a Demo of the LameBlame

virus. Push left mouse button to return.
