PICPress 3.2

This version compresses TIF, PCX, TGA and BMP files
to PIC and JPG formats. It also performs color reduction and expands
PIC and JPG images to various color depth BMP files.

Be sure to try viewing multiple PIC/BMP... files to a single palette using the external
palette options. Be sure to compress many images to PIC format, we are particularly
interested in feedback on our batch compress interface.

If you have technical support needs please contact us via our CompuServe forum / Compuserve
Mail at the above address..

Thanks for using PIC products!
