Supporting Unicode Text

Merle Tenney

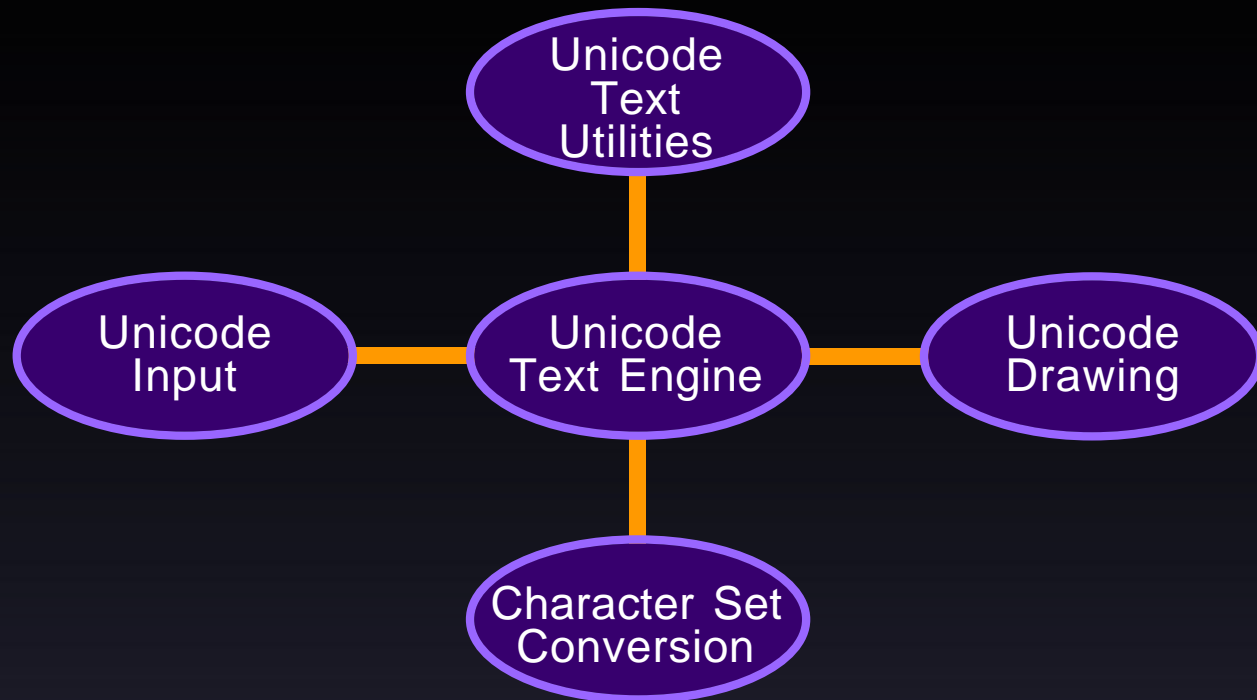

International Technology Manager
Worldwide Developer Relations

What's New?

- ATSUUI 1.1 and 1.2
 - API enhancements, performance improvements, Type 1 font support
- Unicode Text Utilities
 - Collation, character properties, text breaking; new locale model
- Multilingual Text Editor
 - Unicode and WorldScript

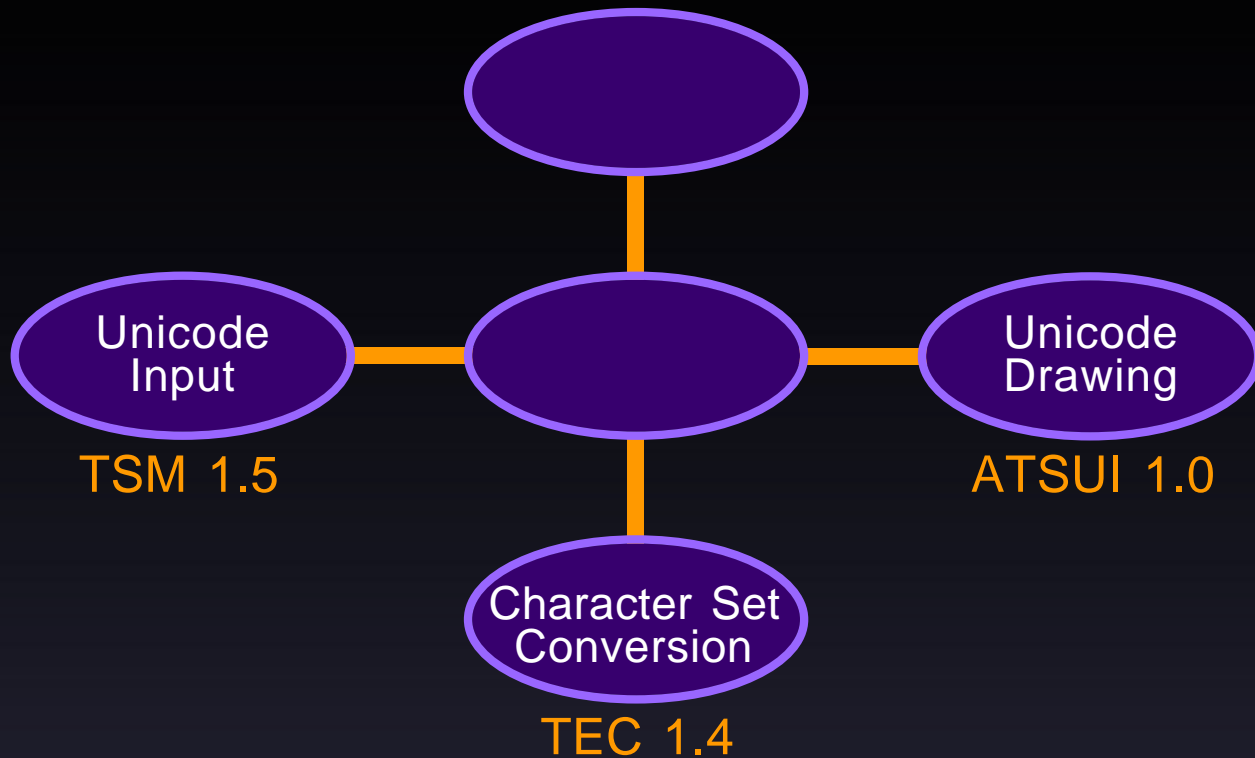

Unicode Text Processing Model

ATSUI and Unicode Utilities

Peter Edberg

Senior Engineer

International and Text Group

ATSUI

- Direct Unicode imaging
 - Combining character support
 - Bidirectional and complex script support
- Larger character and language repertoire
- Support for vertical text
- Advanced typographical features

What's New in ATSUI?

- More flexible memory management
- Client control over font fallbacks
- Better support for tabs and embedded objects
- Language-sensitive word breaking
- Performance and footprint improvements
- PostScript Type 1 font support

Unicode Text Utilities

- Support internationally correct processing of Unicode text
- Counterpart to WorldScript international text utilities
- Mac OS 8.6: new locale model, collation
 - 13 languages supported in US release
- Coming soon: character properties, text breaking

New Locale Model

- Opaque locale reference \Leftrightarrow ASCII tag, ...
- Operations: collation, text breaking, ...
 - Can have variants, e.g., sort orders
 - Can enumerate all locales + variants
 - Create operation “object” to use
- Locales, operations, variants have (multiple) localized names

Mac OS 8.6: Collation

- Superset of WorldScript collation features
- Can support variants: e.g., dictionary order, bibliographic order, etc.
- Both locale-sensitive and -insensitive
- Generate collation keys (binary compare)

Coming Soon

- Character properties
 - Access to Unicode character database
- Text breaking
 - Character (surrogate pairs), cluster (base + accent, etc.), word, line
- Collation
 - Number collation (“Page 2” < “Page 10”)

Unicode Data Types

- Always UTF-16, big-endian, BOM optional
- 'utxt': plain text file/clipboard/resource
- 'utx#': multiple 'utxt' strings
 - 16-bit count of strings
 - 16-bit length prefix for each string
- ATSUI documentation has more details
- CFString: opaque string type in Carbon

In Summary

- Apple fully committed to supporting Unicode in Mac OS
- Apple will focus more and more on Unicode in the future
- Unicode applications can access more data and more languages from around the world

Multilingual Text Editor

Xavier Legros

Software Engineer

International and Text Group

What Can MLTE Do?

- Unicode—input, editing, and display
- Support most-requested TextEdit enhancements
- Handle text files with Mac OS encodings and Unicode
- Provide easy access to advanced ATSUI typographic features

Demo

Lee Collins

International and Text Group

Unicode Support

- Unicode input based on TSM 1.5
- Unicode imaging based on ATSUI
 - Internationally correct text layout
- Expanded character and language repertoire surpasses that of WorldScript and QuickDraw Text

Features

- No more 32K limit!
- Tab support
- Embedded pictures, sounds, and movies
- Full justification support
- Multiple undo/redo

More Features

- Can read and write Unicode files ('utxt')
- Built-in printing support
- Built-in scrolling
 - Live scrolling
 - Proportional thumbs
- Built-in clipboard support
 - Automatically converts to/from Unicode

Ease of Development

- Scalability
 - From labels to edit text fields to editors
- Low-level managers handled transparently
 - Drag & Drop, TSM, Control Manager, etc.
- Fewer lines of code in your application than with TextEdit

Typographic Features

- Hierarchical font menu built automatically
- Simple access to linguistic and stylistic features
 - Ligatures, swashes, variations, ...

Developers
Conference

Demo

In Summary

- A complete text editing solution which removes the limitations of TextEdit
- Supports Unicode, media embedding, and modern UE features
- For intermediate text editing needs
- Developers with advanced requirements can use ATSUI and TSM directly
