

The VB Key Code Generator (c) 1995 by Robert Reinstein
CIS # 76702,2075

The VB Key Code Generator enables you to build into your shareware program a built in registration method for your registered users. You can then post your complete program and add or inhibit features based on a key code that you later supply to your registered users.

The VB Key Code Generator performs thses functions:

- Generates a VB Function that you can include in your VB program that will validate a Key Code that you give your registered user.
- Keeps track of variables, used for generating your Key Codes, that you assign to each of your programs.
- Enables you to quickly generate a Key Code to send to your registered user

See CODEGEN.WRI for details on using the the VB Key Code Generator.

The VB Key Code Generator is distributed as shareware. As a fellow shareware author I'm sure that are aware of this concept, so I will not spell it out here.
This shareware version will only handle 4 projects. The registered version handles up to 99 projects. Registration will also disable opening and closing About box displays.
The cost of registration for the VB Key Code Generator is only \$30. You can register it on-line on CompuServe in the GO SWREG area. Search for CGEN.ZIP.

Thank you for taking the time to evaluate the VB Key Code Generator.

PS- Since you are a VB developer I have not included THREEED.VBX, SPIN.VBX, and VBRUN300.DLL that are required to run this program.
