

SCUD MISSILE DESTROYER #2

Another example program for Microsoft Visual Basic

This program doesn't do much. Follow the instructions on the screen and see what happens. (If it doesn't seem to do much, click on the SCUD, hit IGNORE, and then keep clicking on the SCUD. Note that the background around the missile changes colors each time a click is registered.)

This program is Copylefted as defined by the Free Software Foundation. (That means, you can do anything with it except copyright it.) The developer shall not be liable or responsible in any manner to the user, or to the spouse, children, dependents, guests, invitees, heirs, personal representatives, successors, or assigns for any expected or unexpected results from using the SCUD MISSILE DESTROYER. This includes latent and patent conditions, whether known or unknown in the software.
