Dots Screen Saver by John Bidmead
john.bidmead@pipemedia.co.uk
<http://www.pipemedia.net/~bidmead/index.htm>

[How It Works?](#) A basic explanation of how the screen saver works

[The Configuration Window](#) Customising the screen saver

[Registering](#) If you havent already, how to register.

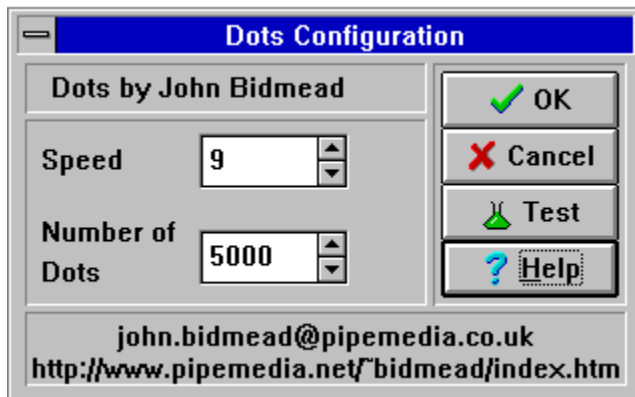

How It Works

The Dots Screen Saver basically works by randomly selecting points around the screen and placing a random coloured dot there. It then clears the screen after a certain amount of dots have been drawn on the screen.

Both the speed of the dots being draw on the screen and the amount of dots draw before the screen is cleared can be set in [the configuration window](#) .

The Configuration Window

Here is the configuration window click on the different parts to find out what the do:

Registering

To register this screen saver only costs £1!! or a similar ammount in American Dollars or French Francs, So if you continue to use this screen saver please register.

This version is not crippled in any way so when you register I will not send you anything just an email to say Ive received payment.

I will accept cheques, postal orders or a £1 coin taped to a piece of card.
Please send your email address when registering.

Cheques/Postal orders payable to John Bidmead please.

My address is :
24 York Close
Market Bosworth
Nr.Nuneaton
Warks
CV13 OND
England

Speed

This determines the speed that the dots appear after each other.

Number of Dots

This is the number of dots that appear before the screen is cleared.

OK Button

This saves your changes and exits the configuration window.

Cancel Button

This loses your changes and exits the configuration window

Test Button

This tests the screen saver with your new settings.

Help Button

This brings up this help file.
