Seal Of Partnership Screen Saver

A screen saver for Microsoft Windows 3.1

Installation

The installation of this screen saver is very simple.
Simply follow the instructions below.

Setup Program

1)   Insert the screen saver diskette into drive A:

2)   Select 'Run...' from the 'File' menu and type 'A:SETUP'
      The SETUP program will copy the files to the appropriate directories

3)   Now configure the screen saver using the Windows
      'Control Panel' application.

      1)   Start 'Control Panel', which is in the 'Main' group of
            the Program Manager.
      2)   Double click the 'Desktop' icon.

      3)   Select the 'Seal Of Partnership' screen saver from the list.

      4)   Press the 'Setup...' button to configure the screen saver.
            (See the next section).

Manual Installation

1)   Copy the screen saver SS.SCR and SS.EXE from the diskette to your
      Windows directory (For exmaple : COPY A:SS.SCR C:\WINDOWS
      or use the Window File Manager).

2)   Copy the CTL3D.DLL file from the diskette to your Windows
      SYSTEM directory (For example : COPY A:CTL3D.DLL C:\WINDOWS\SYSTEM
      or use the Window File Manager).

3)   Now configure the screen saver using the Windows
      'Control Panel' application.

      1)   Start 'Control Panel', which is in the 'Main' group of
            the Program Manager.
      2)   Double click the 'Desktop' icon.

      3)   Select the 'Seal Of Partnership' screen saver from the list.

      4)   Press the 'Setup...' button to configure the screen saver.
            (See the next section).

Configuration

The 'Seal Of Partnership Screen Saver' has a number of configuration
options than can be set using the Windows 'Control Panel'.

-       Boeing 747 airspeed
        This is the speed at which the K.L.M. and N.W.A. Boeings
        'fly' across the screen. The value you specify should be
        between 1 (very slow) and 32 (very fast).

-       Alternate enlarge of 'seal'
        This screen saver supports two methods of enlarging the
        Seal Of Partnership bitmap to it's full size.

        -       The default method will 'blowup' the bitmap until it
                reaches it's full size. This has a nice effect, but
                can be slow on slow machines or machines that do NOT
                have an accelarator card (video card especially made
                to speed up Windows).
        -       The 'alternate' method will increase the visible part of
                the Seal Of Partnership until it is completely visible.
                This method is less nice, but is much faster on slow
                machines or on machines that do NOT have an accelarator card.

        If the checkbox is on (e.g. checked), the screen saver will use
        the 'alternate' method. Simply try each method and see which
        one has the best effect on your machine.

-       Password protected
        If the checkbox is on (e.g. checked), the screen saver is
        password protected. This means that whenever the screen saver
        is active and you want to continue working in Windows, a dialog
        appears that will prompt you for your password. This can be
        used to make sure that someone else cannot use your PC while
        you are out and your screen saver is active.

        You can use the 'Change...' button to change the screen saver
        password. You will have to enter the old password followed by
        the new password. You also have to 'retype' the new password
        to make sure that you did not make any typing erros.

Starting the screen saver from the desktop

You can also start the screen saver by double clicking on
the screen saver icon that is in one of the program manager
groups on your desktop. Follow the instructions below if
you want to be able to do this (you can start the screen saver
manually at any time you like e.g. going for a cup of coffee).

1)   Copy the screen saver SS.EXE from the diskette to your
        Window directory if you did not already do so (For example :
        COPY A:SS.EXE C:\WINDOWS or use the Windows File Manager).

2)   Create a program item in the program manager group of
        your choise and enter 'SS.EXE /s' in the command line textbox.
        Make sure you do NOT forget the '/s'.

3)   You now have an icon that can be double clicked to start
        the screen saver from your desktop at any time you like.

Have fun...
