

Gopher for Windows
Version 2.2

Copyright (C) 1994 by Computer Services Centre, The Chinese
University of Hong Kong

This is a gopher client running on Microsoft Windows 3.1 system.
It is located at ftp://ftp.cuhk.hk/pub/gopher/PC/wgopher.zip

PROGRAM REQUIREMENT

1. Microsoft Windows 3.1
2. Windows Sockets (WINSOCK.DLL) v1.1 or above

FEATURES

1. Bookmarks
2. Text, Binary capability
3. Image capability (need to use external image viewer)
4. telnet,tn3270 capability (need to use external telnet application)
5. Index capability
6. CSO capability

FILES

1. WGOPHER.EXE
2. README.TXT
3. SAMPLE.INI

INSTALLATION

1. Create a new directory for the gopher files.
2. Copy WGOPHER.ZIP into the directory you created in step #1.
3. Use PKUNZIP.EXE to unpack WGOPHER.ZIP.
4. Create the following directory for the temporary files:
C:\WINDOWS\TEMP
5. Add the following environment variable to your AUTOEXEC.BAT file:
SET TEMP=C:\WINDOWS\TEMP
6. Run MS Windows and add Gopher for Windows as an item to a

new or existing program group.

The first time you run Gopher for Windows you will have to edit some of the configuration information and an initialization file WGOPHER.INI will be created into the working directory.

Things to do

The following features will be implemented in the future:

1. Help menu
2. Fonts selection
3. Sound support
4. Movies support
