

A powerful new BOX Format type, in AS-EASY-AS, allows the user to create unique, form-type applications. Here is an example:
First, let us put some text and numbers on the screen.

```
                23.5                                1091
                Box
            122.87
                Is
                Format                                Here!
```

Now, press ENTER to see the result....
Fast and Simple! It was all done with a single
Command sequence /RFB (Range, Format, Box)!

```
-          -          -          -          -          -
-          -          -          -          -          -
-          -          -          -          -          -
-          -          -          -          -          -
-          -          -          -          -          -
```
