

Welcome to SCEdit V2.01, © 1993 CICA Inc.
SCEdit is a Strategic Conquest™ V3 gamefile mini editor. SCEdit has three functions:

(1) Makes all map squares visible in a Strategic Conquest V3 gamefile (you can thus see all of the unexplored territory and see where the enemy cities are located).

(2) Maximizes the strength (to 31) of any piece (this is quite a bit above the normal strength of a piece, which ranges from 1 to about 17). As an example, allows you to create "super" destroyers or "super" bombers!

(3) Allows you to change any piece into any other piece type; i.e. you may change a lowly fighter to a bomber, or a submarine to a transport. Note that when you transform one piece into another type of piece, the new piece retains the strength and certain attributes of the old piece. Therefore you should be careful about transforming pieces, making sure only appropriate transformations are done (do not transform pieces with no fuel into bombers or land armies into ships, etc.)! You may also wish to strengthen a piece once you have transformed it.

SCEdit is from the fine folks at CICA Inc. We are also the creators of HyperNetwork CHESS, the amazing chess program and chess database with built-in modem and AppleTalk network support.

We are also the creators of SCodeW, which will patch and disable the codewheel in the Stratego game application.

SCEdit is shareware. If you send us the shareware registration fee (\$10 or whatever you think it is worth), we will send you an entire assortment of our shareware goodies:

(1) The latest version of SCEdit along with its source code! This is a FutureBasic™ application; for all of you HyperCarders or others wanting to break into Macintosh programming, see how easy it is to do with FutureBasic™!

(2) You will also receive a copy of SCodeW (the Stratego UncodeWheel application) along with its FutureBasic™ source code!

(3) You will ALSO receive the on-line version of our very popular HyperCard network chess

program, HyperNetwork CHESS. This incredible HyperCard stack has received very favorable reviews and comments from many publications, including the "MacUser Guide to Shareware", and is an editor's choice pick on the ZMAC network.

(4) Telephone support for any of our shareware products (actually, we will be happy to talk with anyone using our shareware products, but we are likely to talk to you at great length if you pay the shareware registration fee). See our address and phone number below.

(5) Our eternal gratitude and the knowledge that you have helped in allowing us to continue Mac software development.

Please send your shareware payments (\$10 or whatever SCEdit is worth to you) and any of your comments to:

CICA Inc.
