

Welcome to the Delphi Online Windows NT Users Group information file

Description of our group

How and where to reach us

A little about the Delphi service

Some extra bits and pieces

The door is always open, come join us

What is DOWNTUG?

We are [NT](#) users who use the [Windows NT](#) forum on [Delphi Custom Forum 102](#) to exchange information and provide assistance with [NT](#) and related products. Included in our group are a software developer, a network consultant, a semiconductor engineer, and a telecommunications consultant. We are located all across the country, from California to Connecticut.

DOWNTUG has no organization, no bank account, no officers, and no rules. We just help each other.

In addition to exchanging messages and conferencing on [Delphi](#), we sometimes [RAS](#) into each other's computers, in order to exchange files and mail, as well as learn more about how to use [NT](#).

How to reach us.

Some of us also are on other online systems. If you belong to one of those, and would like to inquire further, please feel free to email one of us.

Don Barnard, Jr., CIS 76560,27
Randolph Kinney, Internet kinneyr@delphi.com or kinneyr@indirect.com
Mark Marabella, Internet Allebaram@delphi.com
Ken Schrock, CIS 73474,1335
Colin Whipple, CIS 70347,2314 AOL CWhipple2

Also, Randolph Kinney and Ken Schrock have NT Remote Access Servers set up. You can RAS in from 6 P.M. to 6 A.M. daily. Randy is in Arizona on mountain time, and Ken is in Ohio on eastern time. Initially use a username of "visitor" and password of "welcome" on either system. Note that both are all lower case. If you wish, you can ask for a permanent account.

Randy's number is (602) 955-8781
Ken's number is (216) 478-1851

We have found that connections with some long distance carriers are problematic. We have had the best results with MCI. You can use MCI by simply putting the MCI access code (10222) in front of the number. You don't have to have a MCI account and you will be billed normally for the call.

Randy's number then becomes 10222-1-602-955-8781

Once you are connected with RAS, you can connect to the drive by using CONNECT NETWORK DRIVE in file manager. Randy's path is \\486DX50EISA and Ken's is \\BUS. There is a PUBLIC directory in both machines. On Randy's machine leave notes or messages in public\torandy and on Ken's machine in public\incoming.

What is Delphi?

Delphi is one of the smaller national online services. However, it includes numerous message forums with message thread following capabilities, file databases, and full Internet access for a monthly surcharge of only \$3. Included among the message forums are a PC Computing forum, a Custom forum devoted to OS/2, and numerous other custom forums devoted to almost anything you could think of.

Custom forums are created (with the cooperation of Delphi) and run by users, and are NOT monitored (as far as we know) or interfered with by Delphi management. Custom forums appear to be an excellent way for specialized groups to get together and communicate with each other, as the Delphi NT User Group is doing.

Bits & Pieces.

We bring news and articles related to [NT](#) and OS development to the forum. We also try to collect [NT](#) programs and utilities in the library on [Custom 102](#). ([Delphi](#) calls libraries databases) Some include the source code and help files.

Denet

[Delphi](#) has an extremely klunky command-line interface. One of us has written a freeware GUI front-end for it called DeNet. This program can be obtained from the [Custom Forum 102](#) program database, or by [RAS](#) from any of the [NT](#) User Group members.

DeNet currently runs only under [NT](#).

You are invited to join us

We invite other [Windows NT](#) users, and other people interested in advanced operating systems, to join us here on [Delphi](#).

There is no doubt [Windows NT](#) has a lot of potential as an operating system. But there are not a huge number of [NT](#) users yet, and you may be finding it difficult to find other users to share information and ideas with.

We think that our group on [Delphi](#) is a very cost-effective way of doing this.

[Delphi](#) is a national online service, accessible through Sprintnet and Tymnet. Once an individual signs up with [Delphi](#), through an 800 number, he or she has access to a list of local Sprintnet and Tymnet phone numbers.

[Delphi](#) has several fee options; one of the more appealing is what [Delphi](#) calls the 20/20 Advantage Plan. The following is a quote from some [Delphi](#) information:

"On the new 20/20 Advantage Plan, members receive their first 20 hours of access each month for only \$20. If you happen to meet someone online or find some other diversion, don't worry because additional usage is only \$1.80 per hour.

"20/20 Advantage rates apply for access via SprintNet or Tymnet from within the continental United States during home time or via direct dial around the clock. Home Time is from 7pm to 7am weekdays and all day Saturday or Sunday. Access during business time (7am to 7pm weekdays) carries a surcharge of \$9 per hour. These rates apply for most services, but note that there are some surcharged areas on [Delphi](#) which are clearly marked with a "\$" sign."

To join [Delphi](#), get your credit card handy, and do the following:

Dial by modem **1-800-695-4002**
Press **Return** Once or Twice
At the Username prompt type **JOINDELPHI**
at the password prompt type **CUSTOM102**

That's the basics. You will get further information during the sign up process.

When you sign on to [Delphi](#), you can reach the [Windows NT forum](#) by entering:

Go custom Forum 102
