Subject: Flow charts made simple.

The file FLCHRT.WKS is a `123' worksheet for the IBM PC. The purpose is to be able to quickly draw a flow chart outline using Alt keys. You can then either type in the boxes or print the logic. You should be able to outline a page in just a few minutes. The `Alt E' option allows you to enlarge a box. You may copy this file, rename it, and create your own version.

In order to draw one of the above items place the cursor in the upper left corner of the area you want it in. Then use the Alt key and the appropriate letter. The boxes should display properly when the cursor is positioned in columns A,E or I. Start your flow chart beginning in row 60. Have fun!
