

- - -
- COMMENTS on the key macro contained in the menu below:
- * Set up printer by clearing, code pitch (cpi), eliminate page breaks.
 - * create dummy range 'HERE', go to proposed starting row.
 - * move pointer left & down a row,
 - * start new label with the formula column giving Title/Surname,
 - * go left to the Street column & print,
 - * go right 1 more column & print City,
 - * go right 1 more column & print POCode,
 - * add 5 lines to make label of 9 (ie 1.5 inches).
 - * If '@NA' is found in column A, then exit, otherwise LOOP.
 - * finished, go back to Menu.

- - -

MORE COMMENTS

Call up the menu with <alt-O>. The other macros therein are reasonably clear from the subtitles.

LPRINT starts printing from the row BELOW the cell pointer!!!

LPRINT stops when an '@NA' is found in column A, so ...

... PUT '@NA' AT THE END OF YOUR LIST !!!
