

Help for **WinAlarm** ©1993 Nathaniel S. Johnson

WinAlarm offers Windows users a one-time, popup alarm utility for use within a single, 24-hour time period. Once the alarm has been set, **WinAlarm** will sit quietly as a clock icon at the bottom of your screen. When activated, **WinAlarm** pops up, flashes your designated message in the title bar, beeps and displays a multi-colored blinking main screen with digital clock.

1. Start **WinAlarm** and click on **M**essage. Enter any reminder such as, **Feed the cats!** If you choose not to enter a message, the titlebar defaults to **WinAlarm**.

2. Enter the alarm time you want and click on **Alarm Off**. The button will change to **Alarm ON** and the screen will become a

clock icon at the bottom of your screen.

3. When the alarm sounds and the main screen pop up, you can choose either to click on **Exit** or click on the button **Alarm ON**. This button then changes back to **Alarm Off** and you are ready to enter a new time and/or message.

4. WinAlarm's main screen position can be moved to wherever you wish. Whenever you click on **Exit**, **WinAlarm** remember's its last position. This program will pop up over any running application but will not interfere with the current program.

This program is FreeWare and is copyrighted ©1993 by Nathaniel S. Johnson. You may copy **WinAlarm** and pass it on to friends but you may not charge for it under any circumstances. Vendors and distributors may make this program available to their customers but may not charge beyond the standard ShareWare distribution fee.
