1.2   copyrights

                    Pro-Wizard 2 is Copyright 1993-94 by Nicolas FRANCK - All Rights ↪
                Reserved

Pro-Wizard-2 is a SHAREWARE program ! The unregistered version is freely
distributable on condition that all files mentioned in the
                DISTRIBUTION
                are copied with the main program.
No modification must be done at all !! (Program and docs)

PD Collectors like Fred Fish are allowed to include the unregistered
version of Pro-Wizard 2 in their library, under the same conditions.

If you use regularly Pro-Wizard 2, I invite you to register yourself.
You only have to fill the "registration form" (that should be in the
'Docs/' directory) and to send your donation of at least :

                    50 Francs / 15$ US / 20 DM

to the address mentioned in the "About" requester in the program,
or mentioned in the registration form itself...

Then, you'll become a registered user of Pro-Wizard, and you'll receive
your OWN version, without these boring requesters.
You'll also receive some "bonus" files i.e some special modules to be

                converted
                 etc...
And finally, the update versions will be available for free !
You will only have to send me a disk with an envelope (with your address on
and auto-stamped), so you'll receive each new update !

1.3   Requirements

The only thing Pro-Wizard 2 needs is the Kickstart 2.04 (V37) or above !

Except that, it works on every Amiga model, all configurations,
hard-disk or not etc.... but it is recommanded to have a "minimum" of
Free-Memory to be able to load the files to be scanned and a hard-disk
is welcome too ! :-)

1.4   introduction

                Pro-Wizard is a multi-converter for music modules packed with
tools like NoisePacker, Promizer, ProPacker, ProRunner and so on....
(you'll find the list of all known
                formats
                 below).
Of course, it converts these formats into our good oldy PROTRACKER format!

Moreover, regarding to a tool like Delitracker, it's better to

```
                     convert
                     packed modules into Protracker format, so that Delitracker plays' ←
                          em
in the correct way.... Coz with each Deliplayer, sometimes, some functions
are very bad written and some effects are not handled etc...
```

1.5   What's new in this version 2 ??

```
                     Pro-Wizard 2 runs in a totally different way than the versions 1.x ←
                          .
Now, it opens its own screen, screen that you can choose at the beginning.

There is a nice Graphic User Interface, which reacts on mouse-events,

                     gadgets
                     ,
                     menus
                      select and some shortcuts ! User-friendly or what ?? :-)

If you're used to work with the versions 1.x of Pro-Wizard, you must
remember that you could only load ONE file at a time !?
Boring, no ?
Moreover, Pro-Wizard was only able to recognize modules at the BEGINNING
of each file...

Now, these two problems have disappeared !!

Pro-Wizard 2 offers now :

- MULTISELECT ! In the loading requester, you can now select more than one
                     file, with the "ALL" gadget or by using the SHIFT key and
                     picking all the files you want !

        Pro-Wizard will switch to "multi-files" mode, where all is automatic!
        You'll only be asked for a Destination-Directory in which Pro-Wiz
        will save all found and converted modules.
        All operations will be done automatically, you'll have nothing to do
        except follow the operations till all files are handled...
        Then a big recapitulation window will open, with the converting
        statistics, all
                     formats
                      and the number of converted modules for each.

        Of course, you can still choose only ONE file, so Pro-Wizard will
        run as in the versions 1.x, with all the requesters (confirm,
        enter the composer name, the saving name etc...)

- FILE-RIPPER !! Yeah ! Now Pro-Wizard scans for modules in WHOLE FILES !!
                     Not only at the beginning !

        Here are two examples of using :

        - You receive lots of little "one-file-demos", intros...
          You only have to decrunch'em (with DLD 2.0) and then, you load
```

            all these files in Pro-Wizard 2 which will scan all over your
            files to find modules !   Remember to use "ALL" !!

        - You own an Action Replay or so ?? Fine ! When you freeze a demo,
          no need to look for the packed module yourself : just save ALL
          your CHIP-RAM in a file, and load it in Pro-Wizard 2 !!
          Essential or what ??? ;-))

Thanks to these 2 options, rip'n'convert is very easy, fast, and coooool !

1.6   ...and other great new features !

                As well as these 2 new functions, here follow other great new ←
                    features :

- XPK support.

- Iconify function. A little window opens on the Workbench screen.
        Close it to uniconify !

- New

            formats
             : 12 new ones ! See the complete list below...

- Original format name inserted in the DOS_Comment. No need to edit the
        module to know which format it comes from.

- Modules which already have an own name will be saved back with this name,
        not the filename (KRIS, UNIC, LAXITY, EUREKA....)

- In "multi-files" mode, when saving a module which name is identical to
        an already saved module, an underscore is added at the end of
        the filename to avoid deleting the first one... and so on...

- In "one-file" mode, when Pro-Wizard finds a module, as well as the two
        buttons "Convert or Abort", there is a new button :
                VIEW
                        which allowes you to have a look at the beginning of the ←
                            module
        AND a "model" of a module from the same format, in order to
        compare DIRECTLY the two headings !
        It's very useful to be sure of what you gonna do...
        Coz if you confirm conversion for a WRONG module, be sure that
        a GURU will follow !   In this case, please, send me the file
        for hot debugging :-)

- Finally, there is another great improvement :

        The Graphic User Interface !

        Using gadtools.library of course (besides, I thank a lot the
        authors of Delitracker, for their help concerning some basic
        gadtools routines ! Thanx Peter & Frank !).

        This GUI may be used with

```
                      gadgets
                      ,
                      menus
                      , shortcuts...

            You can enable/disable each format you want, in order to speed up
            scanning. (If you know what kind of format you gonna rip,
            disable all the others !) Of course, there is a way to enable or
            disable ALL the formats together !
            You can also change the palette of the screen, and the screen mode
            depth, size, autoscroll...
            Of course, you can save these PREFERENCES !
            (saved in 'Pro-Wizard.prefs' in your 'S:' directory)

            While scanning a file, you can abort all the work or just skip
            the actual file, to scan the next ones.
```

Besides, concerning the conversion routines, I only have to mention that
the Noise/Star/Protracker modules are also recognized, and are just saved
back (no conversion needed for these formats).
All the check-routines have been improved and improved, to avoid wrong
recognitions !

I thank specially   - Mexican Boy -   for his great Beta-Testing !!

Otherwise, the versions-1
                 bugs
                  have been fixed, like the P50A recognition
bug when similar samples were used in a module...

1.7   installation

                Pro-Wizard 2 is very easy to install, here what you have to do :

- Copy all the files in 'Libs/' in YOUR 'LIBS:'
            - reqtools.library © Nico François
            - xpkmaster.library © Urban Dominik Mueller
        and the 'compressors/' sub-directory with 'xpkNUKE.library' !

  If you already have these files, no need to copy them.

- Copy what there is in 'S/' in YOUR 'S:' directory
  --> The file 'Pro-Wizard.reco' which is used for the
                VIEW
                 function.

That's all !
Then, if you have a hard-disk, you can create a "Pro-Wizard-2" directory
and copy the program and his documentations there...

1.8   How to use Pro-Wizard 2

Pro-Wizard 2 runs either from CLI or WORKBENCH.

When you run it for the first time, there is no prefs-file present in
'S:' so, Pro-Wizard displays a Screen Mode requester, in which you can
choose your favorite screen resolution etc...

If you Cancel the requester, Pro-Wiz exits immediatly ! Otherwise, it opens
your screen and then the GUI appears with all the
                  gadgets
                  ...

Immediatly, the "About" window shows up (in the registered version you'll
be able to switch on/off this window) telling that Pro-Wizard 2 is a

                  Shareware
                   program, the release date and the number of recognized
                  formats
                  for this version.

When you close this window, you're in front of the main GUI...

                  Gadgets Description

                  Menus   Description

                  Go to Convert !

                  Displayed Informations

                  'View' Function

                  Convert...last words

                  Known Bugs !

1.9 gadgets

                  You can notice that the screen is divided into 3 parts, in the ←
                      upper-left
   corner, a 6 gadgets area, on the right, the progressing bar for scanning
   with 2 other gadgets (Abort & Skip) et all the low part of the screen
   with all the checkboxes for each format to enable/disable.

   Let's examine these gadgets...

   In the first area, you find :

   - About   : Displays the "About" window.
   - Docs   : Displays some docs-windows & other infos about Pro-Wizard.
   - All   : Enable ALL the
                  formats
                  .
   - None   : Disable ALL the formats.

```
      - Convert : Start the
                   converting
                    job (LOAD requester etc...)
      - Quit    : Guess what !? :-)
```

  Note : When you press "None", and then press "Convert", Pro-Wizard tells
         you that you disabled ALL the formats, so that he doesn't know
         what format to check for !! ;-))
         So : At least ONE format enabled to run a conversion.

         When you select "Quit", there is a "Are you sure ?" request.

         These 6 gadgets also have shortcuts :

         - About   : Amiga Right + "?"
         - Docs   : Amiga Right + "D"
         - All   : Amiga Right + "A"
         - None   : Amiga Right + "N"
         - Convert : Amiga Right + "C" or "RETURN"
         - Quit   : Amiga Right + "Q" or "ESCAPE"

         "RETURN" for Convert is there to keep the habit with the versions 1
         of Pro-Wizard (all could be done with this key...).

  You can notice that the 2 gadgets on the right are disabled, they become
  enabled only when you run into a conversion, and then, the 6 others
  become disabled, and vice versa...
  These 2 gadgets also have shortcuts :

         - Abort : "b" (without any other key)
         - Skip : "s" (without any other key)

  'Abort' also has a "Are you sure ?" requester.
  If you confirm, the converting job is entirely canceled and Pro-Wizard
  displays the Statistics window (if you were in multi-file mode), otherwise
  it comes back to the initial state (the 6 gadgets are enabled back).

  'Skip' hasn't got a confirm-request. This gadget stops the actual scanning
  and Pro-Wizard loads the next files, if any...

  The checkboxes are easy to use, aren't they ??
  Don't forget to use 'ALL' and 'NONE'.

1.10   menus

                  They are composed of the 6 functions of the 6
                gadgets
                 already seen PLUS
  some other functions :

Menu 1:

  Project

```
    -------

  About          A + "?"            See '
                 gadgets
                 '
  Docs/Infos     A + "D"            See '
                 gadgets
                 '
  =====================
  Convert!       A + "C"            See '
                 gadgets
                 '
  =====================
  Iconify        A + "I"            Function "Iconify"
  =====================
  Quit           A + "Q"            See '
                 gadgets
                 '

Menu 2:

  Prefs
  -----

    Welcome      A + "W"                On/Off the "About" window (Welcome)
    Reco-File    A + "R"                On/Off loading of 'reco' file.
  =====================
  Formats                  >>        Sub-menu :
                                           - Tag All   A + "A"         See '
                 gadgets
                 '
                                           - Tag None  A + "N"         See '
                 gadgets
                 '

  Palette        A + "P"                Change the color palette.
  Screen Mode    A + "M"                Change the screen mode.
  =====================
  Save Prefs     A + "S"                Save the preferences.
```

  Some explanations about the new functions :

  Menu 1 : "Iconify" will close Pro-Wizard screen and open a little window
           on your Workbench, telling that Pro-Wizard is in Sleep-Mode.
           You only have to close this little window to return...

  Menu 2 : "Welcome" and "Reco-File" are only ON/OFF flags which don't
           produce anything when you use Pro-Wizard at this time, but
           they will configure the next execution of Pro-Wizard, if you
           save the preferences of course !

           !!! "Welcome" is only present in the registered version !!!

           It is used to choose wether you want the "About" window to be

```
          displayed at the beginning or not.   This window ALWAYS appears
          in the unregistered version...

          "Reco-File" is used to Load or not 'Pro-Wizard.reco' (in 'S:')
          which contains all the formats-models for the
               VIEW
                function.
          This loading is done at the beginning, if checked ON !

          "Palette" displays the Palette Requester of reqtools.library
          to change the colors...

          "Screen Mode" displays the Screen Mode Requester of reqtools
          to change the screen resolution when you want.

          "Save Prefs" is.... save prefs !! :-)
          It has got a "Are you sure ?" request.

          The saved data are :

          - ON/OFF flags "Welcome" and "Reco-File".
          - Palette colors.
          - Some screen data.
          - ON/OFF state for each format "checkbox".
```

1.11 Start a conversion

```
               Let's come to the most interesting point...

Like in Pro-Wizard 1, a file-requester appears, to select one or several
files to scan...
Don't forget to use ALL or SHIFT.

Here, there is 2 situations :

- You chose only one file, Pro-Wizard is in "one-file" mode.
  Some
               info-texts
                print at the top of the screen, name of loaded file,
  address in memory, file length....
  and you can see the progressing bar "progress" to the right, scanning
  the whole file.

  If the bar ends without any found module, Pro-Wizard tells you that
  he recognized nothing at all : Unknown Format !

  On the contrary, if one of the known formats is detected,
  a little requester appears, telling that :

          " Possibly Found a "
          "Protracker module!"    (this is an example)

  Then you have the choice between 3
               gadgets
                :
```

- Convert : Confirm the conversion, and...........trust God ! 8)
- View   : Print the heading of the found module, see that later...
- Abort   : Cancels the conversion.

If you select 'Abort', the progressing bar will continue to progress
till the whole file has been scanned...

If you confirm the conversion, it is done, and if no problem occures,
a new file-requester appears, asking you to enter the name of saved
module (protracker module). A name is already there, you can modify it.

For some
                formats
                , there can be then another requester asking you to
enter the name of the musician who composed this music, if you know...
When done or canceled, Pro-Wizard goes back to initial state.

- You chose more than one file, Pro-Wizard is now in "multi-file" mode
  and asks you immediately to select a Destination-Directory in which
  will be saved all the found'n'converted modules, automatically...

  You can press 'Cancel', to abort all this.

  If you select a directory, there is nothing more to do till Pro-Wizard
  has achieved to scan all the files that you've choosen. You only have
  to watch what it's going on...

  You can, all the same, do 2 things : Cancel the whole conversion with
  the "Abort" gadget or the "b" shortcut, or jump the actual file with
  the "Skip" gadget or the "s" shortcut.

  If Pro-Wizard finds and converts some modules, no requester appears,
  nothing breaks his work... all is saved automatically. There is no
  "Who composed it ?" requester anymore of course...   And when all is
  done, the big recapitulation window opens with all the converting
  statistics, for each format, and the number of unknown formats too.

  Then, go back to initial state !

1.12 Informations displayed

Above and under the progressing bar, some texts appear when Pro-Wizard
scans a file.

Above the bar, these are the data of each loaded file,
there are 2 lines :

"xLoading (then Scanning) File 01/?? : Name of loaded file"

"Located at : $00000000 - Length : 0000000 bytes"

```
    The "x" is there to remind you that Pro-Wiz loads and decrunches
    itself any crunched file.
    The second line tells you where in your memory the file has benn
    loaded, and its size...
```

Under the bar, these are the data for each found module :

```
"Converting a NoisePacker 2 module..."              (example !)
```

and when done :

```
"Now Saving a Protracker module..."              (on the same line)
```

These messages are very fast sometimes ! Above all if you work in Ram,
and if you have a fast processor :-).
Fortunately, the big statistics window will remind you everything
at the end.

When all is finished, a little "Ready." appears under the progressing bar
telling you that Pro-Wizard is waiting for something to do ;-))

1.13   View Function

```
    !!!! This function is ONLY available in ONE-FILE mode !!!!
```

When Pro-Wizard has found a module, in the requester, you can press
the VIEW button to see what Pro-Wizard has found...

A big window (almost as big as the whole screen) appears, composed of
two LISTVIEWs one above the other.

The first one, at the top, displays the heading of what Pro-Wizard has
found, and the second one, a heading-model for this format.

Two options :

- You didn't allowed the loading of 'Pro-Wizard.reco' with the flag
  in the Menu 2.

  Pro-Wizard will confirm you this fact :

              "Pro-Wizard.reco" isn't in memory"

  To load this file without leaving Pro-Wizard, you have a gadget
  between the 2 LISTVIEWs : "LoadReco".

  So, pick it, and the file will be loaded in memory, IF YOU HAVE COPIED
  IT IN YOUR 'S:' DIRECTORY !

  The second LISTVIEW is filled with a heading model thus...
  And the "LoadReco" gadget becomes 'Disabled'.
```

– You allowed the loading of this file at the beginning, so, no problem,
  the 2 listviews are filled...

  It's up to you to compare the 2 listviews in order to learn if Pro-Wiz
  has really found a good module.... or not.

  You can quit this VIEW window by two ways :

  – Close the window :-)))
  – Hit the "ESCAPE" key.

  Then, you come back to the little requester "Convert / View / Abort".

  Nota : The big VIEW window cannot be dragged. It is fixed !

## 1.14  Convert....End

                  Usually, a conversion takes 2 or 3 seconds max, and even 1 second  ←
                    for
some
                  formats
                  ....so if you see it lasts and lasts, it could mean that
Mr Guru Meditation had decided to have a walk in your amiga...hum hum...
Daya know CTRL+A+A ??? huhu :-)))

Well, seriously, lots and lots of tests have been made again for this v2.0
so that you shouldn't be confronted to this situation too often...
unless the initial module was trashed, fucked or bugged (hey!).

In case of crash, don't hesitate to contact me !!

NOTE : The 2 requesters (LOAD & SAVE) are independent from each other,
you can (and should) specify a different directory for each one,
they'll be stored during all the converting work (till you change'em or
quit Pro-Wizard).

The composer name that you may enter will be inserted in the first sample
name of the protracker module... as for Pro-Wizard v1 versions.

## 1.15  Known Bugs

  In fact, this is not a "bug" but just an information :

  The Old-Soundtracker (Soundtracker 15) modules are not recognized.
        Use Exotic Ripper ! hehe..
        Or load them in your Protracker and save'em back (31 samples) !

  IMPORTANT NOTE :

         If you meet a recognition bug (ex: you load a Unic module and
         it is recognized as a Protracker), you can use the enable/disable
         function to "bypass" the bug : switch off the Protracker checkbox
         then, Pro-Wizard won't execute the PTK check-routine, thus your
         Unic module will be well recognized...

         This was just an example !

## 1.16   distribution

If you've just been given Pro-Wizard 2, you must find these files :

!!! Pro-Wizard 2 --- Unregistered Version  !!!

```
  Pro-Wizard                            ; The program.
  Docs/                       (DIR)
    Pro-Wizard-2.Orderform              ; To fill and send to me to become
                                        ; a registered user.
    Pro-Wizard-2_English.doc            ; English Doc.
    Pro-Wizard-2_English.guide          ; English Doc, hypertext.
    Pro-Wizard-2_French.doc             ; French Doc.
    Pro-Wizard-2_French.guide           ; French Doc, hypertext.
    Pro-Wizard-2_FORMATS.guide          ; Hypertext Doc explaining how to
                                        ; recognize each format.
    Pro-Wizard-2_History                ; Bugs fixed !
  Libs/                       (DIR)
    reqtools.library                    ; ReqTools.library v2.0+
    xpkmaster.library                   ; XpkMaster.library
    COMPRESSORS/            (SUB-DIR)
        xpkNUKE.library                 ; Compression Library 'NUKE'.
  S/                         (DIR)
    Pro-Wizard.reco                     ; NUKE_Crunched File conposed of all
                                        ; heading-models for each format.
```

!!! Pro-Wizard 2 --- Registered Version !!! (may be changed)

```
  Pro-Wizard                            ; The program.
  Docs/                       (DIR)
    Pro-Wizard-2_English.doc            ; English Doc.
    Pro-Wizard-2_English.guide          ; English Doc, hypertext.
    Pro-Wizard-2_French.doc             ; French Doc.
    Pro-Wizard-2_French.guide           ; French Doc, hypertext.
    Pro-Wizard-2_FORMATS.guide          ; Hypertext Doc explaining how to
                                        ; recognize each format.
    Pro-Wizard-2_History                ; Bugs fixed !
    READ_ME.First                       ; Info about how to use XPK
  Libs/                       (DIR)
    reqtools.library                    ; ReqTools.library v2.0+
    xpkmaster.library                   ; XpkMaster.library
    COMPRESSORS/            (SUB-DIR)
        xpkNUKE.library                 ; Compression Library 'NUKE'.
  S/                         (DIR)
```

```
   Pro-Wizard.reco                    ; NUKE_Crunched File conposed of all
                                      ; heading-models for each format.
 C/                         (DIR)
   xpk                                ; xpk tool in order to depack the
                                      ; documentation files, if you want.
 Bonus-Modules/             (DIR) ; Some modules to convert !
 Bonus-Progs/               (DIR)
   ModInfo                            ; Displays PTK module heading...
   ModInfo.doc                        ; And its documentation.
```

```
   Just copy all the 'Libs/' files and sub-dir in YOUR 'LIBS:' and
   the 'Pro-Wizard.reco' in your 'S:' and Pro-Wizard will be ready !
```

1.17 Hot Thanks

```
                 - Nico François  for his marvellous  © ReqTools.library !!

 - Urban Dominik Mueller  for the great  © XPK libraries and all the authors
   of compression libraries.

 - Delitracker authors (Peter Kunath & Frank Riffel).

 - Exotic Ripper authors (Turbo & Marley / Infect).

 - Pascal for his help in debugging by testing all his packed mods !

 - Elenfeste for the cooool disk-label (for the registered users) !
   BIG Thanx Romu ;-)

 - All other Beta-testers who tested, test or will test Pro-Wizard
   (try not to find too many bugs huhu !)
   Thanx especially to Mexican Boy who proved to be very active
   in his Beta-Tester job ! :-))

 - All the users who, I hope, will find Pro-Wizard useful, effective and
   convivial !  (Oh yes, I worked HARD for, be sure of this !!)
   Mega-Thanx to everybody who wrote to me, especially from others
   European Countries; it always gives me great pleasure !

 - Great thanks to all
                 registered users
                  ! Thanks to YOU !
```

1.18 Features summary

```
                 - Written in  * 100% Assembler *  !

 - User-friendly : mouse / gadgets / menus / keyboard !
```

- Prefix "mod." added to the save_name before saving.

- Requester structures LOAD & SAVE stored separately, very useful if you
  want to convert lots of modules in one session.

- Asking for the composer name (optional).

- Suppression of the "mod." prefix in the module_name INSIDE the module,
  not in the DOS name...

- Suppression of the packed module prefixes ("PP21" or "NP2" etc...)

- Indication of the original packed format in the final module
  (inserted in the 16th & 17th sample_names).

- Disabling DOUBLE-CLICK when saving the final module (RT option)
  this avoids erasing of a file by mistake...

- Tested on Amiga 4000 '040 with Enforcer : NO ENFORCER HIT !!
          (Thanx Pascal, I want MY A4000 tooooooo !)

- Possibility of aborting the conversion in each requester.

- Powerpacker & XPK crunched files auto-decrunched.

- Mega-Doc-Files including a very useful part "How to recognize each format
  in memory" (.GUIDE) with a heading_model for each format... essential !?

- Multi-Select allowed in the Loadinf requester, 99 files max !!

- File-Ripper !!!!!!!!!!

- 12 new
                formats
                 for the v2.0 !! ----> 40 known formats !

- Possibility to enable/disable each format.

- Palette requester, Screen Mode requester.

- Graphic User Interface !

- Recognition help inside the program (
                VIEW
                 function).

- Iconify function !

1.19 All Known Formats

                Here is the list of all known formats that Pro-Wizard is able to
                convert
                 :

---- Formats ---- | ---- Examples ----

```
Noise/Protracker   :  Moby "Elekffuuunnnnnnkkkkk" !!!
Channel Player v1  :  Game "Fury...", Tunes "Intro, Usine"
Channel Player v2  :  Game "Fury...", Tunes "Desert, Village..."
Channel Player v3  :  Game "Fury...", Tune "Forest" (only one!)
Digital Illusions  :  Pinball Dreams & Fantasies games...
Heatseeker Packer  :  CRB Party Time Demo (wiz the cool zoom)
Pygmy Projects     :  Pygmy Projects "Extension" Demo !!! Tune by Jester.
Laxity-Tracker     :  KEFRENS "Desert Dream" & "Dane"
EUREKA-Packer      :  ANARCHY "Spring Melodies"
Wanton-Packer      :  FINLANDIA Music-disk !
UNIC-Tracker       :  KEFRENS "Egregious", "Guardian Dragon 1&2"
KRIS-Tracker       :  That's 4mat tracker ! (Chuckrock...)
SKYT-Packer        :  French diskmag "Pros It" by DRIFTERS
Xann-Packer        :  DIGITAL "Lethal Exit" Demo
AC1D-Packer        :  ANARCHY "In The Kitchen" Demo
NoiseRunner        :  SANITY "Arte" Demo
Pha-Packer         :  LEMON "Announce" Demo  (ex-HanniPacker)
NoisePacker_v1/2   :  Most of PHENOMENA demos and music-disks...
NoisePacker_v3     :  Music-disk "Mirror" by ANDROMEDA
Promizer_v1.0c     :  Old version...  ANARCHY "Flower Power"
Promizer_v1.8a     :  DRD "Arkham Asylum" (Hello Moby!)
Promizer_v2.0      :  DRD "Bubble Bobble music" by Reflex
Promizer_v4.0      :  PM40.Do You Wanne, Movement "Numb"
ProPacker_v1.0     :  DAI Music-disk (too cool "Soulman"...)
ProPacker_v2.1     :  Yen a tout un tas ;-)
ProPacker_v3.0     :  All the Static Bytes Eurocharts !
ProRunner_v1.0     :  SILENTS "Something...makes me sick"
ProRunner_v2.0     :  SANITY "Interference" Demo
The Player v5.0a   :  Most of the Virtuals Dreams Prods, like "Full-Moon"
The Player v6.0a   :  ...
GMC                :  Knights of Sky Title
Soundtracker 2.6   :  SpaceWalk
IceTracker         :  Order of Death II
StarTrekker Pack'  :  Cave BBS Intro (OLD)
Module Protector   :  Adprod Music, Grapevine diskmags...
Avalon Packer      :  Avalon Demo
Fuzzac Packer      :  Silents '90 Demo "Tropical Sunset"
FC-M Packer        :  Scoopex "Occasions of Sin" music
Old-Kefrens        :  Certaines ziks de la Kefrens MegaDemo 7 !! yeahh

Up to -40- formats.
Other ones will be implemented as soon as I'll discover'em
but which ones are left ?? :-)
```

1.20   Things to do in the near future...

```
What could I add in the further versions....?

- Of course, still some new formats... 5 or 6 new ones are waiting to be
  "analysed" !

- Localize Pro-Wizard ! As soon as I have some docs about how to create
```

these "catalogs" files !?! I hope that some foreign users will help me
to create these files, for their own language :-)
(I can create the French & English ones).

- Modify the graphic interface, especially all these checkboxes to remove
  and replace'em by a LISTVIEW (like in Delitracker II - Deli-Wizard).
  Each format in a line, so that there will be no limitation to add some
  new formats...

  Moreover, the space left would be used to fit another LISTVIEW which
  would contain all the operations done by Pro-Wizard (functions run,
  loaded file data, saved module(s) data etc...), and thanks to the LISTVIEW
  you could "browse" into the list of operations, since you run the tool !
  Like when you display the HISTORY in a shell console...

  These last GUI modifications should be released very soon, I guess,
  it's the most urgent thing to do...

- Add the new formats in Deli-Wizard, the Genie for Delitracker II !
  (this, only in the registered version !)

1.21   A few last words...

When you send me a module that Pro-Wizard doesn't handle,
or, worse!, a module that it knows but it doesn't recognize (ohhh a BUG!)
don't forget to tell me which version of Pro-Wizard you used to convert it.
And above all, be sure that the litigious module is strictly the same as
it was when you ripped it from memory ! (See the HISTORY for some problems
due to this fact, in Pro-Wizard v1.4, v1.4a)

For the doc-file concerning the format-recognition, refer to the
"Pro-Wizard_FORMATS.guide" !

                 End Of File ! See you in further versions !! ByeBye....

                              --==> GRYZOR <==--
