Chapter 1

FreshFonts

1.1 FreshFonts Contents

Welcome to the FreshFonts CD-ROM. This guide will help you ←
installing and
using the fonts on your system. It contains also a complete list of all fonts
and samples for each font.

So here are the topics:

Installation

Copyright

Fonts List

1.2 installation

No entry.

1.3 copyright

This CD-ROM is copyright © 1994 by
Danny Amor
. You can use any of the
files according to its related documentation. You are neither allowed to
make your own CD-ROMs based on this compilation nor are you allowed to
distribute a disk series based on this CD-ROM.

1.4 fontslis

There are four formats available.

DMF

IntelliFont

Bitmap

Adobe

The following six directories contain the fonts.

Sans Serif

Serif

Deco

Non-Latin

Script

Pictures

1.5 non-latin

This drawer contains non-latin fonts.

Arabic

Greek

Hebrew

Russian

Serbian

1.6 dmf

The DMF Format

This format is used by the most powerful DTP program available on any system. It's called PageStream 3.0 for Amiga (before you PC and Mac users start to complain, check it out first).

The files are a little smaller than the

Adobe

files, which can

also be used within PageStream 3.0. It is faster though than the

Adobe

format.

Each directory contains the font file (.dmf), the metrics file (.fm) and screen fonts (.*?) (?? = 12, 14, 18, 24).

1.7 intellifont

The Agfa-IntelliFont Format

This format is the standard Amiga fonts format which can be read by almost any program on the Amiga. It is also widely spread on the Mac and not so common on the PC.

The font consists only of one file (.type on the Amiga, .lib on the other systems).

1.8 bitmap

The Bitmap Format

These bitmap fonts can only be used on the Amiga (I don't have any converters to other systems). The fonts normally have the following sizes: 15, 30, 45, 60, 75, 100, 150.

The fonts can be either Black&White or Colour. The Colour Fonts have various textures on them. Any Amiga Program can read them and the colour fonts are especially useful for video production (e.g. Amiga Toaster System, Scala Multimedia etc.).

1.9 adobe

The Adobe Format

The Adobe Format is used on any system a lot.

Each directory contains the following files:

#?.abf: Screen font
#?.afm: Font metrics
#?.pfb: Font in binary format (adobe type 1)
#?.pfa: Font in ascii format (adobe type 1)
#?.ps : Printer-Font (adobe type 3)

1.10 sans serif

This drawer contains sans serif fonts.

Jupiter

Stuart

1.11 jupiter

Jupiter

This is a standard sans serif font. It can be used for standard text. There are four types: medium, bold, italic and bolditalic.

Font Formats: -

Black&White

1.21 hebrew

This drawer contains Hebrew fonts. Latin characters remain in ↔
positions

32 - 127 and the Hebrew characters are from 192 - 224. Amiga user should
copy the keymap file to the DEVS:Keymaps directory and choose the "Hebrew"
keymap from "Input" in order to use the hebrew character set.

Solomon

1.22 solomon

Solomon

This is an old style Hebrew Font.

Font Formats: -

Adobe
(Type 1 [pfa & pfb], Type 3, Bitmap)

```
-  
  DMF  
    (+ bitmap)  
-  
  Bitmap  
    (Black&White & Colour [8 Colours])
