

Super Boomerang™ 4.0.1

What Can Super Boomerang Do For You?

Every time you open a document, application or folder, Super Boomerang remembers it, adding it to a list of recently-opened files and folders and helps you get to it quickly next time you need it. Super Boomerang can also search for items that may not be in this list, saving you time you might otherwise spend switching back to the Finder and manually searching through disks and folders.

- Remembering your recently-used items

Since you usually open files and folders repeatedly, Super Boomerang greatly reduces the time spent locating them by listing recently-opened files and folders in three convenient locations (the Apple menu, within Open/Save dialog boxes and attached to the “Open...” commands within applications) so that you can quickly find and open any item that you need.

- Enhanced Open/Save dialog box

Besides adding recent file and folder menus to the standard Open/Save dialog box, Super Boomerang also makes it possible to search for files, create new folders, and even duplicate, rename and delete files from within the dialog box.

- Searching for files by contents

Besides being able to search for documents (even if they are compressed), Super Boomerang can search for text within a document. This way, when you’re having trouble finding a letter that you have written, just type in the name of the letter’s recipient and Super Boomerang will find it in the salutation. It’s that easy!

Here’s How!

- Quick access to files and folders

1)

Highlight Super Boomerang in the Apple menu; a submenu of recent files and folders appears.

2)

Change the number of files and folders displayed in this menu by opening the Super Boomerang control panel and adjusting the number of items “shown in the menus.”

- Finding files

1)

Open Super Boomerang’s powerful Find function from either of two locations: the submenu off the Apple menu and from the “Options” menu within any Open or Save dialog box.

2)

Type the name (or partial name) of the item you’re searching for. If you’re not sure of the document’s file name, you can even have Super Boomerang scan for a specific text string within files. Not only does Super Boomerang have one of the fastest search functions on the market, but it will also list all matches it finds, unlike the system’s Find function which finds only one item at a time.

3)

Double-click the item to open it.

- Creating Folders

Super Boomerang lets you open new folders from Open/Save dialogs in any application.

1)

In any application, choose "Open..." or "Save as..." from the File menu.

2)

Choose "New Folder..." from the Options menu.

3) Name your folder and Super Boomerang will add it automatically.
