**Please make check payable to: CompuWorks**

When ordering, remember that high quality sound files are VERY large - over 10MB per minute after decompression. Many sound editors and players work only from memory, which would require you to have over 20MB of memory to edit or play a two minute wave file. With more professional, disk based editing software, this is not a problem, as the files are edited and played directly from disk. *(We use and recommend Sound Forge 2.0 from Sonic Foundry. It's the best we've found.*

Files beginning with the prefix **HE** were created by The Hollywood Edge, and files with a **SG** prefix are from Sound Ideas, Inc. Additional suppliers have been licensed and their sounds will soon appear in future catalogs.
