Chapter 1

TimePiece

1.1 Introduction

TimePiece ©1995 Gary Greenhill

version 0.62

gary@infernaldemon.co.uk

1: [What Is It?](#)

2: [Installation](#)

3: [Usage](#)

4: [About](#)

5: [Known Bugs](#)

6: [History](#)

7: [Disclaimer](#)

1.2 Disclaimer

TimePiece is completely and totally FREE to be distributed as you see fit, provided you keep this documentation with it.

I am not responsible or liable for any use or abuse of this program.

1.3 History

V0.62 Corrected the program launcher.

Uses default font.

V0.6 First public release.

1.4 What is it?

TimePiece is a program to display free memory, the time and launch applications.

1.5 How to install TimePiece

copy TimePiece to c:

copy timepiece.menu to s:

add the line

run >NIL: c:timepiece

to s:user-startup

reboot.

1.6 How to use TimePiece

Apart from simply typing TimePiece on the command line, if you wish to be able to launch programs you must have a file called timepiece.menu in s:

This file will look something like this..

```
MENU Utilities MENU
```

```
ITEM Calculator ITEM
```

```
COMD sys:tools/calculator COMD
```

```
ITEM Read ITEM
```

```
COMD sys:tools/mi COMD
```

```
QUIT
```

MENU is the title of the main menu.

ITEM is the itemname in the menu.

COMD will run that command when the ITEM directly above it is selected.

QUIT is used to show the end of the menu file.

1.7 Bug..

There are known bugs.. this is not the final version:

The application must be one word,.. currently it can have no arguments.

1.8 About

TimePiece ©1995, Gary Greenhill, EMail: gary@infernaldemon.co.uk

Written using FREEWARE dice and FROZENFISH includes. It is also my first true Amiga C program.

Tested by J. Waland, walaj@abstrusedemon.co.uk.

Help, advice, criticism of any sort to:
