

Version 1.1 of Enigma provides one main enhancement - it can encrypt **any** type of file; applications, DA's, fonts, documents - anything.

One warning: Enigma documents created with version 1.05 are **NOT** compatible with this version! If you have any of these, decrypt them with enigma 1.05, then encrypt them with enigma 1.1.

As with version 1.05, help panels are included under the About... menu.
