Documentation w/Graphics in Word for Windows Format.*
Improved Help System.
Selectable lights for monochrome devices.
Numerous minor fixes and enhancements.

Due to legal obligations we are unable to provide certain functionality for unregistered users at this time. Because of this obligation we will grant a 30 day trial for registered users. If you are dissatisfied with the product within 30 days of receiving it in the mail send it back and we will gladly refund your money.

If you do have a problem leave us your phone number and we will try to get it fixed for you. When contacting us please include the following information:

- . Computer Model (Ex. Compaq 386)
- . Windows Version (Ex. 3.1)
- . Dos Version (Ex. 5.0)
- . Modem Type (Ex. Hayes Ultra 9600)
- . Details of action when probel occured.

Please keep those letters coming. Your feedback is important to us in determining the furture directions for our product.

The directory file has been modified to accomodate several changes we needed to incorporate. (Its the last time!) Two small programs have been included to convert your directory file to the new format. The syntax for the new conversion files are:

DIR2DR1 OLDFILENAME NEWFILENAME

if you are converting from release 0.8 or

DR12DR1 OLDFILENAME NEWFILENAME

if you are converting from release 0.9.

In either case DO NOT give the new file the same name as the old file.

It is suggested that you back up the old file before you run this process. You should replace your MLINK.INI file with the one we have provided as that has also been modified.

Registered users will be receiving their copy in the mail in the next few weeks.

*** Notes ***

The Scroll Back function will not operate while the Scroll Lock Key is enabled.

There may be some incompatibility with themlink.ini file with the current version. If start up errors occur please erase the oldmlink.ini file and let the application create a new one.

The program will automatically engage in communications with the modem at start-up.

If you encounter a Modem Initialization Error please restart the application with the following sequence: Win Mlink * . This will create a file called TRACE.FLE. After the error is encountered please shut down the application. If possible transmit the file, along with a copy of the numeric modem result codes and flow control commands, to CompuServe to ID 72510,1766, Atlanta Windows (404-516-0048), or mail it to the address on the registration form.

Please avoid using the Set Modem Default commands on the setup string. We require that result codes be displayed in numeric format. If the default parameter is set to verbal a modem initialization error will occur. (Ex. &F is a common command for setting the default modem parameters).

Special Thanks to Ray Louis for help with the Script Architecture and all those Beta Testers willing to commit the time to test our product.
