Comments:

This is a 1.00 version whith limited capabilities, I'd like to include support for revolutions, progreseds, fixed starts, locations, aspects, parts, etc, and the hability to merge / compare two or more maps.

I need time (money) to do this, so your contribution will be very appreciated. Of course, your suggestions and/or comments will be accepted too, to improve the program.

I wish to know about who got this program, although you d'ont agree with sending 20\$, a letter or post card, it wil be very appreciated too.
