

WATER!

The Original Water Use Tracking Program for
Microsoft Windows 3.0

by:

Matthew A. d'Alessio

WATER!, as the name implies helps you keep track of your your water usage over the period of 4 years (Later Versions will have more yearly capabilities...). It not only makes it so your your water bill won't give you a heart attack, but also so you help minimize your use. Online help can be activated by chosing it from the `Help' menu or by clicking anywhere there are no little boxes. A feature I like is your estimated bill for the year. This takes in to account only your water usage, not late fees, over-the-limit use, or any of those type fees. It only takes into account what you tell it the fee is. As of 7/15/91, the fee was \$3.25 per CCF (Hundred Cubic Feet) of water used in the MMWD (this rate includes regular usage, \$2.50/CCF, and the first tier drought charge, \$0.75/CCF) [See your water bill for clarification. To change the price per CCF, use Windows Notepad or another text editor and open 199x. WTR (x is either 1, 2, 3, or 4). Change the last # (it is 3.25 default) to the current price per CCF in dollars.

This program is freeware, so distribute it to whomever you want, but make sure they get all the following files:

WATER!.WRI (this file)
WATER!.EXE
1991.WTR
1992.WTR

1993.WTR
1994.WTR

For those of you who are incredibly nice and use this program regularly, \$5 donations (or \$1000 donations are also excepted...) are **GREATLY** appreciated.

I hope to get another version out with new features. I welcome any of your comments!

ENJOY!

Matthew A. d'Alessio
