Winfo Version 2.0.f

What is WINFO.EXE?

WINFO.EXE (Window Information) is a small FREE(!) program that allows you to examine your configuration as Windows knows it.

WINFO.EXE can be freely distributed as long as there is no charge for it. When distributed, the following **UNMODIFIED FILES** must be included: WINFO.EXE, WINFO.WRI and WINFO.TXT.

It must also be noted, WINFO.EXE is provided "AS IS". That is, without warranty of any kind, expressed or implied.

Whats New:

Version 2.0.f utilizes a 'button' interface as well as the systemmenu interface. In addition, more information is now displayed!

How to start:

You can start WINFO.EXE in the customary Windows methods. These include, File Manager, adding the program to an existing group, etc.

What does it do after it has started?

WINFO.EXE will load and then appear as a small Window on your desktop ready for use.

To obtain information about your system:

- 1) Use the mouse pointer and click on the button of interest.
- 2) Use the 'accelerator' keys to select the button of interest.

Also, if WINFO is displayed as an ICON, you may use the system menu to obtain the same information.

After an item is selected, WINFO.EXE will then display a dialog box. The dialog box contains a scrollable list box of the desired information.

What's Next:

Even More Information!!
Enjoy!
