-Note-
mIRC supports allmost all IRCii commands that make sense in mIRC and/or windows... Commands like Set_blabla are not supported cause Windows uses pull down menus and option dialogs to change settings. Other commands like Scroll_lock make no sense in the Windows. Guys, we have scroll bars.... All standard server specific commands are available too... If you need more info on any command listed here, type /help <command> in mIRC.

All (?) mIRC's commands :

/ Recalls the previous command entered in the current window.
/! Recalls the last command typed in any window.
/action <action text> Sends the specifed action to the active channel or query window.

/whois <nickname> Shows information about someone in the status window.
/whowas <nickname> Shows information about someone who -just- left IRC.
/write [-cidl] <filename> [text] To write the specified text to a .txt file.

Idea of the day : Print this file as well as the mIRC FAQ and store them in the bathroom ! You'll read them !
(...... no people, not -as- but next to the toilet paper..)

The syntax used in this file is the one DOS uses too.... look in your DOS help files to get a gooood explaination
        {x}, {x|by or <x|y> means you HAVE to use one or more of the choises
        x|y means use x OR y
        x,y means use x and/or y
        [x] means you can but dont have to use this parameter

[-a] Will force the item to be added to the list (not toggled)
[-r] Will force the item to be removed from the list (not toggled)
[-q] Will force the operation to happen quietly (no report in any window)

EXAMPLE :
        /echo <N> [nickname|#channel|status] {text}
Displays the given text only to YOU on the given place in color N {1..6}.

in this case you ALWAYS have to give a number N in the range 1,2,3,..6.
and you HAVE to give the 'text'
and you -can- give a nickname (to display the text in a private window)
OR a channel name OR the word 'status' to display in your status window..

EXAMPLE :
        /auto [on|off|nickname|address]   (the auto-op function)
here your possibilities are
/auto to ; see its status
/auto on ; to set it on
/auto off ; to set it of
/auto nickname ; to toggle autoopping of a person by nick
/auto address ; to toggle autoopping of a person by address
