

CA600.ZIP  
Canadair Challenger 600

Contents:

ca600.doc                      this document

Description:

The Canadair Challenger 600 is one of the largest and thickest "T-tailed" business jets. It is airliner-deep through the fuselage with headroom for six-foot-tall passengers and seats four abreast. Some Challengers are being used by the military and as VIP transports.

Specs-

length: 68.3ft(20.82m)  
span: 61.7ft(18.8m)  
max crusing speed: 445kts  
power: two ALF502L turbofans each rated at 7,500lb st thrust  
seating capacity: 28

This is my very first serious AAF creation and I'm rather proud of it. The simulation is kind of stiff but it will keep your passengers comfortable. On landings use full flaps and no spoilers at about 120 to 130 kts, depending on your style of touchdown, should put you in a real good configuration at the middle-marker. If I receive enough requests, I would be more than happy to provide an .afx in the future. If you like my work then look for CA600RJ.ZIP, a stretched version that seats 50 passengers.
