This is a fully featured Windows 3.1 MIDI sequencer with a special emphasis on the needs of General MIDI which you will know is the industry standard used by MultiMedia applications and hardware.

Procyon started as a request from users for a fully specified MIDI sequencer which was also affordable. With the backing of the huge GoldStar company this is now a reality, together with all kinds of other music products. More of this later.

You will find the possibility of pattern based sequencing a real pleasure although you can use it as an old style track sequencer if you really must!!

Using the MIDI ports you are no longer limited to 16 MIDI channels.

You will find all the information you need to run to program in the extensive help section built into the program.

This version is the 'Pro' sequencer and includes a full patch list system, drum grid editing and score display, editing and printout - plus a load of extra features like 100 tracks and a 'motorized' MIDI mixer.

Hardware

You must have at least Windows 3.1, 386 16Mhz or better, DOS 5 or higher, a hard disk and at least 2Mb of RAM and a MIDI interface or sound card. For the SMPTE facilities your MIDI interface must support this feature.

And that's not all...

Don't miss the GoldStar GMK-49, a MIDI controller keyboard loaded with features.

For the keyboard enthusiast try the new GoldStar S230 keyboard, a low cost 61 note keyboard with 128 built in General MIDI sounds, easy play facilities and expander mode to play from your computer. Details from your distributor.

Try Samplitude - A real time multitrack recorder. Demo from Compuserve or the Procyon update BBS +44 1525 852773
