## **Overview**

From the building of the first man of war, the Great Harry, in England in 1514 and lasting until after the first steam battleships were built in England in the early 1810's, the age of fighting sail lasted over three hundred years. Ruling the seas of the world meant ruling the trade of the world, and trading all over the world created the wealth of the sailing nations.

Battles between sailing ships were brutal. In the wars between the English and the Dutch, ships would fight all day long. At night when the captains couldn't see to fight each other each side would frantically repair its ships to fight again the next day. 175 years later the English style of battle was to pummel a ship along the waterline with cannon shot where a ship's oak sides were weakest until the sides gave way and the ship sank. The French preferred to fire above the deck, where cannon loads of chains and metal scraps would kill sailors on the decks and tear apart a ship's rigging. The Americans relied on the speed of their frigates and the shrewd heroism of their captains.

A naval battle between sailing ships was more chaotic than ordered. Admirals made strict plans for their fleets. A captain breaking formation against the plans of his admiral faced dishonor, jail or even execution. But as fate and the conditions of the sea and winds changed in the course of a battle the carefully planned formations of each side would decay into a wild scramble of ships. Crippled and confused, ships would fire broadsides on each other and try desperately to "cross the tee" hoping to fire a killing broadside across their enemy's bow in the "Melee at Sea".

## **Playing the Game**

### **The Object of Melee**

The object of Melee at Sea is to sink all the ships of your opponent without having all of your ships sunk.

### **Sinking Ships**

At the start of a game a ship has one, two, three or four sails. When a ship loses all its sails, it sinks. You sink ships by firing cannon from your ships. You fire your cannon by moving your ship beside an opponent ship. A ship hit by cannonfire loses one sail.

### **To start a new game**

Press the New Game button or choose New Game from the Game menu.

### **To move a ship**

Select a ship by placing the cursor over it and pressing the left mouse button. Holding the button down drag the ship to a new position.

A ship can move up, down, left or right but cannot move off the playing area or through another ship.

To change in the middle of a move, drag the selected ship back to its starting position, then select another move or ship.

### **To fire cannon**

A ship fires its cannon when it is side by side with an opponent ship.

## **Rules of the Game**

### **The rules for Melee at Sea:**

#### **Winning**

You win when your opponent's fleet is completely sunk.

#### **Starting**

Melee at Sea is started by pressing the New Game Button or by selecting New Game under the Game menu.

The blue fleet, to the bottom of the playing area, always moves first.

Melee at Sea (if registered) may be played between two human players or between a human player and the computer.

When playing between a human and the computer, the human always plays with the blue fleet.

#### **Turns**

Melee at Sea is played in single turns alternating between the blue fleet and the red fleet.

A turn is taken by moving a ship.

A player must move a ship, and may not pass.

#### **Moves**

A ship can be moved up, down, left or right. It may not be moved through a position occupied by another ship, to a position occupied by another ship or off the playing area.

If no ship in a fleet can be moved, that fleet is defeated and the game is over.

#### **Cannonfire**

A ship that is moved is the attacking ship.

An attacking ship fires its cannon if an opponent is to either side at its new position.

Attacked ships fire their cannon to the side also.

Ships fire in the following order:

- 1) An attacked ship fires to its side onto the bow of an attacker.
- 2) An attacker fires to its left.
- 3) An attacked ship returns fire from the left if it is not sunk.
- 4) An attacker fires to its right.
- 5) An attacked ship returns fire from the right if it is not sunk.

A sunk ship cannot return fire.

#### **End of Game**

A game ends in one of three ways:

when all the ships of one side are sunk,

when one side cannot move because all its ships are sunk or unable to move or

when a draw is declared because no ship has fired cannon in twelve moves.

[Strategy and Hints](#)

[Playing the Game](#)

## **Strategy and Hints**

Melee is won by steadily destroying the sails and sinking the ships of your opponent without losing as many sails and ships yourself.

Avoid positions where your opponent can cross the tee on your ships.

Cross the tee on your opponent's ships.

Use your ships with one sail left before they are sunk.

Try to take more than one of your opponent's sails with each attack.

Try to escape for a standoff if you are losing at the end of a game.

[System Requirements](#)

[Suggestions and Bug Reports](#)

## **Sound**

If your computer sound system plays .wav files in Windows 3.1, Melee at Sea will play the sound of cannon fire. If Cannon Fire is selected in the Melee at Sea Sound option box but Melee at Sea is playing no sound :

Check that your Windows sound system is working properly by testing a sound in the Sound option box in the Control Panel Box.

If your system plays sounds but is not playing the Cannon Fire sound another program may be interfering with Windows sound playing, even after you have closed it. Exit Windows, reboot and try Melee at Sea before using other programs.

If you are sure no other program is causing a problem and you are sure your computer meets the system requirements for Melee at Sea, your system may not have enough memory to load the Cannon Fire sound. Melee at Sea will automatically change the setting from Cannon Fire to Beeps if it cannot load the Cannon Fire .wav file.

If you are playing Melee at Sea from a floppy disk you may find that sound quality is poor. To improve sound performance move Melee at Sea to your hard disk.

## **De-Installation**

To remove Melee at Sea from your system:

- 1) Delete meleesea.exe from the directory in which it is installed.
- 2) Delete meleesea.hlp from the directory in which it is installed.
- 3) Delete meleesea.ini from your Windows directory (C:\windows or D:\windows).
- 4) For the registered version of Melee at Sea, delete meleesea.dat from your Windows directory.
- 5) Delete the icon from your desktop.
- 6) Delete the group window titled "Melee at Sea"

To delete the group window, minimize the group window and highlight the group icon by clicking on it once. When highlighted while minimized, the group window icon will show the control box menu. Ignore the group control menu and select File Delete from the main menu of Program Manager.

## **Suggestions**

Melee at Sea has been carefully tested, but if you discover a bug or would like to make a suggestion, please contact me at 74554,263 on CompuServe or by mail:

Bill Bergmann  
P.O. Box 164122  
Austin, TX 78716-4122

Version and Bug History:

Version 1: First release.

Version 1.01: Corrected bug in use of transparent bitblitting using NewTransparent background mode.

Corrected fonts to work when Large Fonts are selected with some video drivers.

Other minor corrections.
