

Welcome to this demo of "PC Computing How Multimedia Computers Work." Based on "How Computers Work," the best-selling book from Ziff-Davis Press, this multimedia tour of your computer is the fastest, easiest, and most entertaining way to discover the incredible power of today's multimedia computers. Just one click begins a fantastic 3-D voyage deep inside your machine. The full program contains:

- Over 50 detailed 3-D animations with 60 minutes of narration, original fully orchestrated music and sound effects;
- 8 different computer tours from "Booting Up" to "How a Program Works";
- Answers to common computer questions from four top computer experts in face-to-face video interviews;
- A zany animated "host" we call Zip Data who delights in getting into bouts of mischief throughout the computer;
- Chapters from other Ziff-Davis Press books, including "How to Use Your Computer," "How To Connect," "2001 Windows Tips," and "Dvorak's Buyer's Guide."

For this demo, we've included the full interface of the program. However, only four of the 3D animations and four of the Zip Data animations are working. Where you can click something, the arrow turns into a hand. Where an animation appears in the full program, but is not available in the demo, the hand will have a circle around it with a slash through the middle.

Here's what you can do:

- Click around the front of the computer. The keyboard and the monitor play movies. Zip is hiding behind the laser printer and the floppy drive opening.
- Click the inside of the computer to take a peek under the hood. The floppy disc and RAM chip play movies. Zip is hiding behind the speaker and the video card.
- Click the back of the computer. You can take a peek, but no movies will play.
- Click the Tours button. You'll see the 8 tour folders, but they won't play movies.
- Click the Map button. You can navigate through the program and, if there's a movie attached to a part you click, that movie will automatically play for you.
- Click the Index button. You'll see the parts that either have movies or Zip Data animations. In the full program, everything is listed here.

To leave the demo, click the door or the Exit button.

To order the full product, visit your local software store, or call The Software Toolworks toll free - 1-800-234-3088. The product is also available as part of a special bundle from Ziff-Davis Press including both the CD and the original book "How Computers Work." Available at most bookstores.
