

*****NOTICE*****

This new version (4.0) of WinLaunch is not compatible with previous versions of Win Launch. The file wcontdll.dll is no longer used. It has been replaced with the file deskcont.dll. The wlaunch.ini file has been renamed to deskcont.dat. It can be renamed by the user to save its' entries. The except.ini file should be deleted. The new exception file is called deskcont.ini. The wlaunch.ini file is not used it its' current configuration. If you wish to modify the previous ini file use

caution. The first lines of data, that are numeric, should be deleted. The file then should be renamed wlaunch.dat. A much safer method is to just start over. Any previous version of Win Launch that uses wcontdll.dll must not be run with this new version of Win Launch. The previous utility called Win Info is no longer available and should not be used. Its functions have been added to Win Launch. Win Info must not be used with this new version of Win Launch.

Welcome to Win Launch. This program requires Win 3.1 or later.

Copy all included exe, dll, hlp and ini files to your Windows directory. You may wish to put Win Launch in your startup group. Run the program and read its help file for informatation on how to work with it. All of the ini and dat files except <deskcont.ini> will be created the first time you run the program.

For information on the Deskcont.dll API and a license to use it contact the author with the information below.

Copy these files:

wlaunch.exe
wlaunch.hlp
deskcont.dll
deskcont.ini

WinLauch will create:

deskcont.dat
wlaunch.dat
wlaunch.ini

I can be reached on Compuserve at 70062,2236.
