

## Installing Kudo

To use the Kudo Image Browser, drag the Claris Folder and QuickTime Extension from the Kudo Folder on the CD-ROM into your closed System Folder, then restart your Macintosh. Kudo needs these items to work properly.

Once your Macintosh is restarted, double-click on the catalog icon to run Kudo. The Kudo application will be launched automatically.

To view the chapters that follow this one, click and hold on the "Contents" menu item and select the chapter you wish to view.
