

[More Info About Kudo-Full Version](#)

For information about Kudo® Image Browser™, call 1-800-843-9497.

Kudo® Image Browser™ is a mixed-media cataloging, browsing and retrieval tool for use with collections of graphics, scanned photographs, clip art, QuickTime movies and Kodak Photo CD images. Visual applications such as Adobe Photoshop, QuarkXPress, Aldus PageMaker and others are enhanced by the functionality of Image Browser. With Kudo Image Browser, you can quickly create and browse through catalogs of thumbnails -- each representing an original image stored on or off-line. Don't worry about where the original files are stored, their format or what application created them. After Image Browser helps you locate your image, you have options to copy, preview, place or open the file with another application.

Image Browser is aware of the human eye's ability to perceive unrelated images at approximately 10 frames per second (fps). Use the exclusive Riffle button for fast forward or backward searches without eye fatigue. You set the speed to view up to 1000 images in under two minutes. -- much more efficient than opening image files one-by-one.

Drag and Place, another Kudo Image Browser exclusive, eliminates the chore of finding the right image using cryptic file names and retyping the file name into a "Get Picture" or "Place" dialog box. Just select a thumbnail and drag it to an open QuarkXPress or PageMaker document. Release the mouse and you've placed a graphic file into your document. It's that easy!

Entire collections of off-line graphics, clip art and Photo CD images can be referenced by a single Kudo catalog. If you select an image that is stored off-line, the software prompts you for the correct volume. This feature frees up precious hard disk space and helps you organize graphic collections.

Your order for Kudo Image Browser includes Claris XTND translators at no additional charge. Image Browser and all XTND aware applications can now easily translate the images on your disk. Includes PICT, TIFF, EPSF, PICS, Photoshop, QuickTime, Kodak Photo CD plus PC formats GIF, PCX, BMP and others.

-

- "Thumbnail" view of all images.

-

- Riffle feature for fast visual searches through image catalogs.

-

- Find command selects images based on any file attribute or any text in thumbnail notes.

-

- Drag and Place feature for quick delivery of graphics into PageMaker 4.2+ and

QuarkXPress 3.1+.

- Standard Cut, Copy and Paste commands.
- Easy to use. Previews, Info and Find dialogs are simple.
- Intelligent scan for new image files. Easy to maintain your catalog.
