 Manage Profiles

A profile is a collection of settings and preferences for one user. **Manage Profiles** enables you to set your preferences for the programs you use to send and receive mail, view information on the World Wide Web, and other tools for interacting with the Internet. You can add **New Profiles** or **Remove Profiles**, or you can click **Change** to update your account information at EarthLink or change your password. If you have people using this computer and you don't want them to mess with settings, you can disable their access to settings.
