Player PRO 4.155

© Antoine ROSSET 1993

This program was conceived
by Antoine ROSSET (handle: Byakhee).

The text and graphics were made
by Mike VENTURI (handle: Cyborg)
and John STILES (handle: ÆON FLUX)

The text scroll was conceived in 680x0 asm
by Shahan MOMJIAN

This program is a Sound-Tracker player.
It permits you to:
- Play music from MOD data files.
- Edit the instruments and partitions in MOD files.
- Save MOD files.

This program is shareware! For the cheap price of $20 US, you can become a registered user, and receive the complete version. You will also receive complete documentation.
Player PRO is the best Sound-Tracker program on Mac for only $20 US!

A little technical information:
The drivers that are used in this program were specially optimized for the Macintosh. The Apple Sound Chip (ASC) is used at its maximum performance, the screen memory and sound buffer accesses are done directly to memory, and the processor is used in Priority 7 mode. This optimization gives excellent execution speed, but may cause some incompatibilities on some machines. If this is the case, feel free to send me a fax so I can fix the problem!

It is also advised to use speakers and stereo to get maximum sound quality.

The MOD drivers are FREELY available for programmers. They consist of a library pack in the Think C format.
The use and the incorporation of these routines in a program is also totally free, so take advantage of it!
Send me a fax so I can send them to you.

The Authors:
Antoine ROSSET: Born in 1972, student in human medicine at the University Hospital of Geneva in Switzerland. Fascinated since the age of 10 by Apple computers: Apple II+, Apple IIe, Apple IIgs, MAC IIcx and, actually, in a Quadra 700! Author of diverse shareware programs and games. Programmer in Digital Imaging Unit (University

Hospital of Geneva), Consulting Programmer, Freelance Programmer and specialized in optimizing 680x0 and Macintosh architecture.
Always ready to get in new projects on the Macintosh. (Don't hesitate to send me a fax!)

/************/

Are you working in an hospital? Do you know what "PACS" (Picture archiving and communication system) is?! Here in the Geneva Hospital, we are developing many Macintosh software programs for PACS!
Champollion - (Import/Export utility for Interfile/Melanie/PET/ACR-NEMA/Papyrus/Matrix/PICT/Quicktime)
Osiris - Photoshop for medical imagery !!
Etc. Etc.
For more informations about these medical freeware, contact:

Mike VENTURI: Born in 1465 under Henry the IIX (at least that what my Mac said to me when I was small...), but after a long and strenuous discussion with mummy, it occurred that I was actually born in Massachusetts in 1953 (yep! Heading for the 40's...)
Got sent to several institutes such as:
The Ecole Nationale Supérieur d'Art Visuel (E.N.S.A.V)
in other words, Art School... went to the Cambre, that's the Belgian version of Art School. I studied mostly Sculpture and Engravings, with little jumps into photography, animation, and painting which I gave up pretty fast. (it ain't easy!)
Particularly, I wound up into doing some work with a Macintosh (Mac Plus at the time) and since, I can't get over it.
Now I'm working with a Mac IIsi (not everybody can afford a Quadra 12000) and my main job is to do the pictures for ROSSET Software and to translate text, such as this.

John STILES: I just cleaned up the translations, some of which were pretty bad.

Shahan MOMJIAN: Student in human medicine at the University Hospital of Geneva. Programmer on Amiga and now on Macintosh in 680x0 asm and in PPC601 asm. To contact me for more informations, use Antoine ROSSET fax, internet address, compuserve address or write to:

Shahan MOMJIAN
