

Installation

Installing PowerBar is not hard and can be accomplished in 2 easy steps:

1) Drag the PowerBar Control Panel to the Control Panels Folder (which is found within the System Folder). Alternatively, you may drag the PowerBar control panel to the System Folder. You'll be told that control panels belong in the Control Panels Folder and asked if you'd like to put PowerBar there. Click "OK" and press enter. PowerBar will be put in the correct location by the System.

2) Drag the PowerBar Folder into the Preferences Folder (also within the System Folder).

Please be certain that these items are placed in the specified locations before attempting to open the PowerBar control panel. No error should result if you open the control panel first, but some features/operations will not be available until all items are installed properly.
