Using PowerBar's Special Commands

PowerBar provides a number of what are called Special Commands.   As described above, most of these commands are PowerBar's version of typical Finder menu options.

The following is a list of the special commands available (with notes where applicable):

• Open Selection

• Print Selection

• Make Alias of Selection (AliasBOSS)

• Duplicate Selection

• Get Info for Selection

• Put Selection Away

• Put Macintosh To Sleep*

• Find - opens the "Find" dialog

• Place Selection Into Trash

• Empty Trash

• Restart Macintosh

• Shutdown Macintosh

• Change File Sharing Settings

• Make New Folder

• Run A QuicKey

• Eject Disk

• Erase Disk

• Undo Text

• Cut Text

• Copy Text

• Paste Text

• Clear Text

• Show Clipboard

• Select All

• About This Macintosh

• Turn Balloon Help On/Off

• Hide Other (non-Finder) Applications

• Cleanup Front Most Window (or Desktop)

• PlaceHolder - Use this as a separator button

* The Put Mac To Sleep command will NOT invoke a screen-saver (some of which may put a "Sleep" menu option into the Finder's Special menu).   It only invokes the "sleep" mode of PowerBooks and Portables.
