

## **StewPot - The Soup Inspector - v 1.0b8**

©1993 by MAUi Software, all rights reserved

This application may be distributed freely, so long as this file ("StewPot Read Me") and the manual ("StewPot Manual") accompany it.

The author, nor MAUi Software, **cannot** be held responsible for any loss while using this package. This is a very powerful Newton soup utility, and **can be used to modify or delete data** in your Newton or the PCMCIA cards you place in it.

**Please be sure you back up your current information before attempting to make any changes!**

### Changes since 1.0b7:

- Added "Copy" to soup menu
- "Move" soup menu now works
- Fixed a problem when displaying more than 4 elements of an array in the frame view

### Changes since 1.0b5:

- Fixed a problem that prevented move operations from the Newton to the card
- Removed the "Format" menu (it was causing too many UI problems)
- Added the ability to work without a card, or with a locked card
- Minor fixes everywhere to keep the statistics correct for any operation
- Entry number is now the "unique id" number that the Newt assigns each entry
- Class object type of edited objects is now preserved

Still left to implement:

- Ability to move all the way down the frame/array tree until you reach editable items (instead of just two levels)
- Auto-backup/restore from inside app

Please send all suggestions, bug-reports, and comments to:
