

Web page authoring  
made easy:

- *WYSIWYG interface*
- *Frames, Tables, form elements and more*
- *Store images, text, HTML code, and more in Libraries*
- *Find and replace*
- *HTML editing*
- *Document statistics window*
- *Supports Java Applets*

**Claris Home Page.** Claris Home Page is the one tool that enables all levels of users to design and edit their own custom World Wide Web pages. It's easy enough for a beginner to instantly develop a dynamic web page, yet has the power and flexibility to give advanced support to even the most experienced web page author.

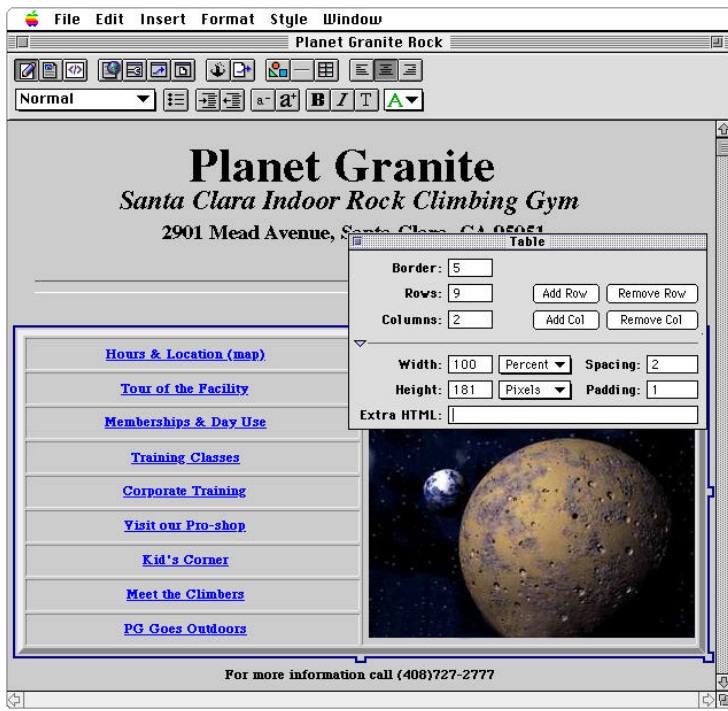

Construct your own web pages quickly and easily using the intuitive WYSIWYG interface of Claris Home Page. No longer do you have to be an experienced HTML programmer to create professional-looking pages—with Claris Home Page, you simply use familiar tools and commands to place text, graphics, and page links. Claris Home Page automatically creates all the HTML code for you and automates many of the time-consuming tasks normally involved in web page development. Experienced web authors have instant access to the underlying HTML code for editing and adding advanced features and extensions.

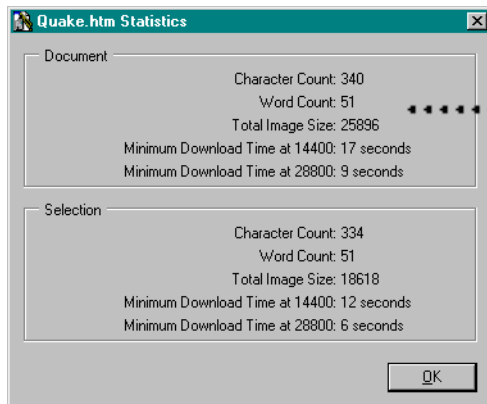

FOR WINDOWS 95/NT  
AND MAC OS

Claris Home Page has a powerful set of World Wide Web authoring tools to help you build pages designed to suit your needs. The “Frames” feature allows you to divide your web pages into separate panes, with each pane acting independently of the others. Use frames to add a navigation bar or an illustration that will remain on screen while the rest of your page scrolls in a separate frame. With the “Table Editor”, you can create and arrange tables of varying sizes for accurate placement of text and graphics to better help organize information. Also, easily make interactive forms with ready-to-use elements like text fields, radio buttons, check boxes, and pop-up menus. Built-in “Libraries” allow you to conveniently store frequently used text, images, HTML code, and more.

Claris Home Page is the smart choice for web novices and webmasters.

Flexible table creation and editing features let you create sophisticated pages easily.

Claris Home Page automatically tracks important statistics about your pages, including the estimated download time for users with 14.4 and 28.8 Kbps modems.

## System Requirements

### or Macintosh

Macintosh, Power Macintosh, or other Mac OS-based computer with a 68020 processor or higher  
 System 7.1 or later, hard disk drive, and 8MB memory (recommended)  
 2MB free hard disk space for minimum installation (6MB for full installation)

### or Windows 95/NT

Intel 486 compatible PC running Windows 95 or Windows NT 3.5.1 or newer  
 8MB RAM (16MB for NT), 3.5" high-density disk drive  
 4MB free hard disk space

## Features Benefits

### Ease of Use

**Form Design Elements** Provides pre-made elements that enable you to create forms easily. Select from text field boxes, pop-up windows, check boxes, radio buttons, password fields, hidden entries, and Submit and Clear buttons.

**Automatic Programming** Does all the complicated HTML work behind the scenes, but you still have the power to access the raw HTML code for advanced editing and customization of pages.

### Powerful Tools

**Text Formatting Support** Offers full support for styles, colors, and formats, including superscripting, subscripting, and more.

**Frames** Divide a page into separate panes, with each pane acting independently of the others. Allows for more sophisticated design and navigation.

**Tables** Create and arrange multi-row and multi-column tables for precise arrangement of text, graphics, form fields, or numerical data.

**Libraries** Store frequently used text, images, or HTML code, for easy use and reuse. The object's URL or links to other web objects or documents remain "live" when transferred to a new web page.

**Find and Replace** Find and replace any word or text block to update your site at anytime

**Built-in Clip Art** Comes with a complete library of enhanced clip art images designed for use in your web pages.

### Advanced Features

**Incorporates Applets Scripts** Allows for the design of interactive sites that call and applets and scripts created in Java, CGI, and Perl.

**Document Statistics Window** Displays estimated download times for the entire web page or any part of the page being created.

### Automatic Features

**Link Objects Editor** Automatically create, copy and paste, or drag-and-drop links onto your page.

**Automatic GIF Conversion** Automatically converts images into GIF format when you drag/drop or paste them from other applications.

**Image Map Creation** Builds image map coordinates (Hot Spots) without
