**This file contains information about Communicae which was updated
after the manual was printed.**

Communicae setup files are all contained in the "Communicae-accessories"
directory, except for the basic default setup, "communicae.cae".   If you will use
any of the other setups frequently, you may wish to drag them out of the sub-
folder up into the top level of /LocalApps (or ~/Apps, if that is where you installed
Communicae).

You should still install Communicae as described in the manual.   However, when
selecting the "handful" of files to drag, you may wish to exclude this file,
"READ.ME", since there is little point in dragging it onto your hard disk.
