

Your Call Client

The **YourCallClient** and **YourCallServer** applications, as described in "Extending the Advantage," are implemented as two separate projects. This project folder contains the **YourCallClient** application. This project includes the following source file changes from the simple **YourCall** application:

CallClient.[hm]

A class that replaces CallController to connect with both the user interface and the CallServer proxy object provided through the Distributed Objects system

callData.h/callProvider.h

Protocols used in CallClient to declare methods for communicating through its CallServer proxy object

Steps for creating this project are included in the source code listings in *The NeXTSTEP Advantage*.
