## **Network Presentation Graphics**

@image\_SG-Half.tiff ↵

@image is a unique presentation graphics package that enhances your ability to produce professional-looking documents and deliver outstanding briefings. @image is a combination of a drawing package and specialized presentation tools designed to be used by mere professionals, not artists or programmers. Its most impressive feature, unique

only to @image, utilizes the power of distributed objects and allows the speaker to deliver a presentation live over a network to other NEXTSTEP workstations. The audience can be around the corner or around the world and receive the same live presentation. @image makes your important message unforgettable!

## **Features:**

- Standard text editors and formatting
- Drawing and color tools (including rotate and skew)
- Speaker's notes attachment
- Master page templates
- Per-page sounds, hot links and copy/paste of RTF, RIB, EPS and TIFF
- Engaging slide transitions
- Gradient background fill patterns
- Network presentation facility

## What makes @image best:

1. NETWORK PRESENTATION: @image is the only package that allows speakers to present over a network to other NEXTSTEP workstations. Speakers presenting on-line may select any workstation(s) on a network running @image to deliver live. The audience can be in the same room comfortably watching from several screens (saving money on expensive computer projection devices!) or across the world and receive the same live presentation.
2. DRAWING TOOLS: @image offers more drawing capabilities and made them easier to use. Other presentation packages rely on separate drawing packages to create graphics which have to be imported into the slide. @image offers a wide variety of drawing objects, background washes and any number of ways to modify a graphic. @image is an all-in-one tool.

3. SPEAKER'S NOTES: @image allows speakers to jot down personal notes and reminders while the slides are being created. "@image Notes" are an attachment to each slide in a presentation that can be printed out separately or viewed on screen.
4. SPEED: @image was optimized wherever possible to provide a faster, more efficient working environment. Most noticeable is the thumbnail caching that occurs before the file is even brought to screen. Users won't be waiting forever to scroll through long presentations. The screen transitions during on-line delivery are also impressively quick making for a smooth presentation.
5. PRICE: @image is priced at \$399, more than half the cost of other presentation/drawing packages. @image is the only choice for sensibly priced, high quality, multimedia presentations!

Requires NEXTSTEP Release 3.1 or higher. Now shipping in Multi-Architecture Binary (MAB) format.
