Dots is a generic printer driver which allows you to connect different printers to your NeXT computer. Dots supports impact dot-matrix printers, ink-jet printers, non-PostScript laser printers and Canon CLC color laser copiers. Printers that are connected with Dots are available throughout the network.

Dots is available in 3 different versions:

Dots 2.0 supports impact dot-matrix printers, ink-jet-printers and non-PostScript laser printers which are connected to your NeXT computer through the serial port or another interface:

- Epson 24-pin dot-matrix printer and compatibles (up to 360 x 180 dpi)
- NEC 24-pin do-matrix printer and kompatible (up to 360 dpi)
- IBM Proprinter XL AGM compatible printers (up to 360 dpi)
- HP LaserJet compatible printers (up to 300 dpi)
- HP DeskJet compatible printers (up to 300 dpi)
- Canon BJ-300 compatible printers (up to 360 dpi)

Dots 2.0 Color can print on the same printers as Dots 2.0, but also supports the HP Deskjet 500 C, a low-cost three-color ink-jet printer that makes printing in color affordable enough for it to be available on every desk.

Dots CLC supports the line of Canon Color Laser Copiers with a resolution of 400 dpi. A PostScript IPU is not required. Dots uses the SCSI port of the non-PostScript IPU-10, which is relatively inexpensive. The following models are supported:

- CLC 10
- CLC 300
- CLC 500

Pricing (license per printer):

Dots 2.0	\$99
Dots 2.0 Color	\$199
Dots CLC 10	\$399 (available June 1992)
Dots CLC 300	\$599 (available June 1992)

Dots CLC 500 \$799 (available June 1992)

Upgrades:

Upgrades from Dots 1.0 to Dots 2.0 are available for free. Upgrades from 1.0 to 2.0 Color are priced at \$99.

For further information about Dots please contact your local NeXT reseller or:
