

Adobe ShowPS™ Quick Reference

Command syntax

```
showps [-help] [-usage] [-version] [-retain] [-sepcmap] [-reds number] [-greens number]
[-blues number] [-grays number] [-dis1] [-dis2] [-dis3] [-dis4] [-ept] [-igc]
[-maxp size] [-mono] [-or orientation] [-ps pagesize] [-pscan size] [-pro file] [-qfb]
[-] [-repsf] [-sc scale] [-sf] [-skipc] [-tdir directory] [-v] [-visual visual]
[-depth depth] [-wp] [files]
```

X resources and command-line options

X resource	Command-line option	Type, values, and default	Description
	-help, -usage		Lists command-line options and X resources.
	-version		Prints out the ShowPS version.
colormapRetainColors	-retain	Type: boolean Default: False	If this resource is set to True and ShowPS has allocated colors in the default colormap, those colors will persist (remain allocated in the colormap) after ShowPS exits. If the visual is not the default visual, or if ShowPS creates a separate colormap, then the allocated colors will <i>not</i> be retained, regardless of the value of this resource or option.
colormapAllowSeparateMap	-sepcmap	Type: boolean Default: True	Allows ShowPS to create a separate colormap if the Display PostScript colorcube and grayramp do not fit in the default colormap.
colormapReds	-reds <i>number</i>	Type: integer Values: 0, 2–256 Default: 0	Sets the preferred number of red values to use in the Display PostScript colorcube.
colormapGreens	-greens <i>number</i>	Type: integer Values: 0, 2–256 Default: 0	Sets the preferred number of green values to use in the Display PostScript colorcube.
colormapBlues	-blues <i>number</i>	Type: integer Values: 0, 2–256 Default: 0	Sets the preferred number of blue values to use in the Display PostScript colorcube.
colormapGrays	-grays <i>number</i>	Type: integer Values: 0, 2–256 Default: 0	Sets the preferred number of gray values to use in the Display PostScript grayramp.
displayShortcutPanel-DialogAtStartup	-dis1	Type: boolean Default: False	Displays Shortcut Panel at startup. The Shortcut Panel contains commonly used File, Page, and Controls menu commands.
displayScaleSelection-DialogAtStartup	-dis2	Type: boolean Default: False	Displays Scale Selection panel at startup. The Scale Selection panel lets you enlarge or reduce the displayed image.
displayPageSelection-DialogAtStartup	-dis3	Type: boolean Default: False	Displays Page Selection panel at startup. The Page Selection panel lets you select a page for viewing.
displayPageOrientation-DialogAtStartup	-dis4	Type: boolean Default: False	Displays the Page Orientation panel at startup. The Page Orientation panel lets you change the orientation of the page within the window.
emulatePaperTrays	-ept	Type: boolean Default: True	Changes the size of the viewing area when the document asks for a different paper size.
ignoreComments	-igc	Type: boolean Default: False	Ignores document structuring convention comments, previewing documents as unstructured documents.
maxPixmapBytes	-maxp <i>size</i>	Type: integer Default: 4 Mbytes	Sets the maximum number of bytes of memory to allow for pixmap storage for the drawing window.
monochrome	-mono	Type: boolean Default: False	Shows a document as it will look when printed on a monochrome printer.
pageOrientation	-or <i>orientation</i>	Type: string Default: portrait	Rotates the page in increments of 90 degrees.
pageSize	-ps <i>pagesize</i>	Type: string Default: letter	Specifies a standard or custom page size. For custom page sizes, use <i>width.height</i> . See other side for standard sizes.

X resource	Command-line option	Type, values, and default	Description
preScanSize	-pscan <i>size</i>	Type: integer Default: 8200	Determines the size of the beginning of a file that ShowPS searches for the PostScript identifier string "%!". ShowPS starts rendering the file at the offset where the identifier is found.
prologFile	-pro <i>file</i>	Type: string Default: <i>none</i>	Sets the pathname of an external PostScript prolog file to be sent to the context after the internal prolog file.
quietFallback	-qfb	Type: boolean Default: True	Falls back to unstructured mode without giving alert message.
readFromStandardInput	-	Type: boolean Default: False	Reads from <i>stdin</i> instead of a file.
repositionEPSF	-repsf	Type: boolean Default: True	Aligns the upper left corner of an EPSF image with the upper left corner of the viewing area.
scale	-sc <i>scale</i>	Type: float Default: 1.0	Reduces or magnifies the view of the document.
substituteFonts	-sf	Type: boolean Default: True	Replaces unavailable fonts with Courier.
skipCopyright	-skipc	Type: boolean Default: False	Skips the copyright notice at startup.
tempDir	-tdir <i>directory</i>	Type: string Default: /tmp	Writes files to this directory (and later removes them) when ShowPS reads from <i>stdin</i> .
verbose	-v	Type: boolean Default: False	Prints a short message to <i>stderr</i> each time an error dialog is displayed.
visualClass	-visual <i>visual</i>	Type: string Values: Best, Default, StaticGray, GrayScale, StaticColor, PseudoColor, TrueColor, DirectColor Default: Default	Sets the visual class for ShowPS to use. See Appendix D of the User Guide for an explanation of how ShowPS handles colors.
visualDepth	-depth <i>depth</i>	Type: integer Values: 1, 2, 4, 8, 12, 24 Default: 24	Sets the preferred visual depth for ShowPS to use. See Appendix D of the User Guide for an explanation of how ShowPS handles colors.
watchProgress	-wp	Type: boolean Default: False	Displays partially complete pages while loading a file.
	<i>files</i>		Loads all specified files in sequence.

Unmark Page: m

Values for pageSize resource

a0, a1, a2, a3, a4, a5, a6, a7, a8, a9, a10, b0, b1, b2, b3, b4, b5, b6, b7, b8, b9, b10, c0, c1, c2, c3, c4, c5, c6, c7, a, b, c, d, e, e1, f,

letter, lettersmall, legal, ledger, 11x17, a4small, note, a3tray, a4tray, b5tray, ledgertray, legaltray, lettertray, 11x17tray, tabloid, statement, executive, folio, quarto, 10x14, Letter, Legal, A3, A4, A5, B4, B5, 17x11

For custom size, specify: *width* [px | mm | cm | pt] : *height* [px | mm | cm | pt]

Filterps command-line options

`filterps [-help]` Lists all command line options and all available filters.

`filterps oldfile [newfile]` where: *oldfile* is the name of a PostScript language file created by one of the applications `-help` returns. *newfile* is the name of the file filterps creates. If you don't provide *newfile*, filterps replaces *oldfile*.
