Intranet Junction

Intranet Web Site Builder

The first of its kind Web-based client-server application, Intranet Junction from Silicon Graphics lets you quickly and easily set up and maintain powerful, multilevel intranet Web sites. The product's templates and graphics streamline the design of customized intranet pages. Select from a variety of template styles to match your working environment, then point-and-click through the entire process from graphics layout and link creation to publishing and ongoing site maintenance.

Easy-to-Use

Written to take advantage of popular Web browsers, Intranet Junction operates in and creates sites for virtually any intranet environment. The intuitive interface does not require user training—simply point your browser to the Intranet Junction page running on your WebFORCE® server and start designing your intranet from any system within the enterprise. Templates let you quickly enter your own content and create links to other intranet pages. Take advantage of artwork included with Intranet Junction styles or leverage your own existing artwork.

Fast Customized Results

Whether you want to share information between project teams or deliver corporate material to an international employee base, developing a site with an Intranet Junction template gets you off to a quick start. Choose from corporate, vertical, free-form, and other styles to define the basic Web site structure. Simply add your own text to the basic template you choose, or modify colors and headers, change font styles, and add icons or your own artwork to make your site distinctive.

Search Capabilities

Intranet Junction uses a high-performance search tool that lets your users find appropriate information on your corporate intranet. The multithreaded robot can fetch and index your site at specified times and dates. With the search tool integrated into your intranet site, you can be assured that critical information is easily accessible to your users.

Secure Environment

By using Intranet Junction throughout your enterprise, you will have the ability to protect your intranet sites from accidental or unauthorized modifications. User passwords control access to the site you create and prevent unauthorized changes to your content.

Reduced Web Publishing Costs

Intranet Junction reduces the workload for the experienced Webmaster and lets individuals quickly and easily publish information on the Web. Your existing staff can use Intranet Junction to set up multilevel corporate intranet Web sites. A full set of graphics, editing, and maintenance features allows you to create, add, delete, copy, and modify site pages, as well as create links to integrate existing pages with new pages.

The Site Overview feature shows you all of the links between pages so you can understand the impact of any content changes before you make them. The straightforward, time-saving procedures for adding to and maintaining site pages translate into lower support costs.
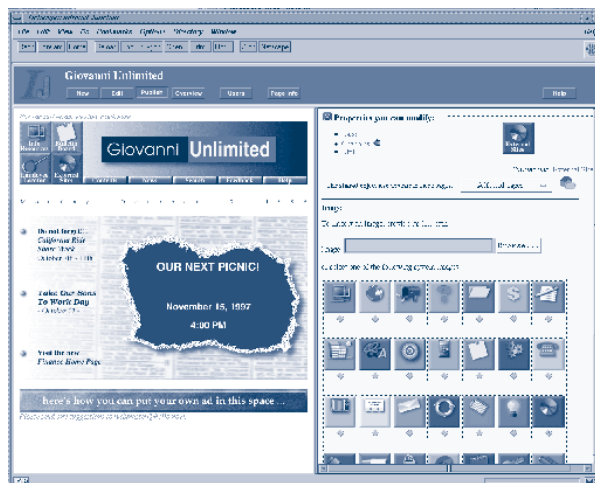

Leveraging Our Experience

With Intranet Junction, you can tap into Silicon Graphics' extensive intranet experience. Intranet Junction and other Silicon Graphics WebFORCE

authoring and Web serving products can help you create your own version of Silicon Junction—the Silicon Graphics intranet gateway. Silicon Junction comprises 1,300 servers and more than 225,000 URLs accessed by employees worldwide. Silicon Graphics employees take advantage of Silicon Junction to communicate and collaborate on projects, share marketing literature, receive human resources information, query customer support, pricing, and product databases, run a variety of applications, and increase overall productivity— all on the Web. Your company can gain the same competitive advantages as Silicon Graphics by using Intranet Junction to begin implementing powerful intranet Web sites.

Intranet Junction Key Features

- Customizable graphics design including icon libraries, high-quality image generation, and incorporation of external artwork
- Choice of fonts, font sizes, and color palette
- Easy addition of author and last-modified date information to Web pages
- Simple creation and editing of URL links, including the creation of links to a predefined script such as a date or search tool
- Built-in functions to add, copy, delete, and undelete sites
- Simplified updates—element changes propagate to every page that references the element
- Customizable footer advertisements

- Optional stock tool to put the stock price indicator on the site home page
- One-button update to publish changes at scheduled times
- User authentication for site creators
- Built-in search engine with a multithreaded indexing robot for fast multiple-site searches
- External HTML editor support to import pages created in other editors into an Intranet Junction site
- Headline archives tool stores old headlines on a second-level page
- Automatic generation of a "lite" or text-only version of your site
