BOLTS is a transaction processing system based upon state of the art client/server technology. The system is comprised of two main components, a client side and a server side. The client side, or System Administrative Services (SAS) in a Multi Document Interface (MDI) application that provides administrative and reporting services. The server side is a collection of well designed modules written in industry standard "C" language which allows BOLTS to be easily ported to many platforms.

IRIX version compatibility: 5.3

MATLAB® Financial Toolbox

The MATLAB® Financial Toolbox for use with MATLAB, available now. The Financial Toolbox provides a robust set of functions essential to financial and quantitative analysis. In concert with MATLAB and related toolboxes such as Fuzzy Logic and Neural Networks, it gives financial professional a complete workbench suitable for everything from running a quick analysis to developing full-featured applications.

Financial toolbox functions fall into the following categories: fixed-income pricing, yield and sensitivity analysis, cash flow evaluation and accounting, equity derivatives pricing and analysis, mean-variance portfolio analysis tools, date functions, and graphic and cash formats. Advanced toolbox functions require the MATLAB Optimization and Statistics Toolboxes.

PSS-BACS™ is the automated software alternative for business payments and collections, eliminating the need for couriers transferring tape or disk by road or air.

Payments such as Direct Debits, monthly salaries, weekly wages, pensions, collections to and from suppliers can be made without the accompanying drain of resources and mass of paperwork by enabling an authorized user to initiate the transfer of funds from his or her terminal.

IRIX version compatibility: Pre 5.x
