ARIA Recorder Reporter is the tool of choice for high-performance Internet and Intranet activity tracking and analysis. ARIA captures the traffic between a web server and its clients, and automatically produces activity reports. ARIA Reporter creates up-to-the-hour HTML reports on website activity. Anyone in your organization can use a browser to view the reports any time. Reports include both detailed tabular information and easy-to-interpret graphical summaries. ARIA provides hundreds of reports to give you a complete picture of who visited you site, what content they accessed, and how they traveled through the site, as well as how activity on your site is disturbed over time.

KIVA Software's KIVA Enterprise Server is server software for rapid deploying and managing the most demanding transactional Web applications. It also allows companies to access the functionalisty of their legacy systems through a web browser. KIVA Enterprise Server's open object architecture allows developers to use their favorite programming languages and tools (i.e. Java, C++, Visual Basic) to rapidly build business critical web applications that leverage its high-performance back-end services. These sevices include: database connectivity, dynamic HTML report generation, load balancing, multi-threading, session/state transaction management and remote server management. All of these services are accessible through a well defined and documented set of class libraries and APIs. A standard web browser or Jave applets are the graphical user interface for KIVA Enterprise Server based interactive business applications. KIVA also provides useful visual tools for easitly deoploying and managing applications once they are built.

htmlscript™

Troy McCasland
Executive Vice President
Htmlscript Corporation
2629 Ariane Drive
San Diego, CA 92109
USA
619-490-2527
619-490-0548 (fax)
troy@htmlscript.com
http://www.htmlscript.com

Htmlscript is a server based web applications development system that provides new tags allowing developers to create complex applications. New tags include: <if>, <evaluate>, <import>, <export>, <mail>, <let>, <hide>, <exit>, <debug>.

Using embedded tags and HTML syntax, htmlscript is extremely easy to use and dramatically reduces development time. The htmlscript pre-processor reads the enhanced tags and outputs standard HTML to the browser. Htmlscript works with all web servers and all browsers. It comes bundled with:

Search Engine

Shopping Cart

BBB-Message Forum

Quiz System

FormsGenerator

Integrated E-Mail

Licensing is on a per server basis, with no per seat fees.
