Overview

You do not need to search for telephone numbers and addresses in your address book, e-mail addresses in Netscape/Internet Explorer's address book, and Fax numbers in your Fax software. Now you can place them all in one location. Whether you want to write a letter, send an e-mail, make a phone call or just access a web page, A1 Visual Contact® will be the first thing you will reach for. It launches browsers, e-mail clients, and word processors of your choice from one location right where you need it. You can even dial telephone numbers from it. Expensive memory telephones are unnecessary. You can do all that with three or less clicks of your mouse button. You do not have to carry your bulky address book .. or be afraid of losing it. With A1 Visual Contact®, you can access your contacts from virtually any computer. The entire software and your contact information can fit easily on two floppies. Within a minute you can use it from any computer in world.

A1 Visual Contact® is designed with two goals in mind: to save you time and money. It saves you time by allowing you to consolidate ALL information about your contacts. It saves you money by providing a rich set of features "Free" (when you use the free-ware version) or a small cost (professional version) which is less than what you would otherwise pay for a conventional paper address book. To save you time, A1 Visual Contact® launches browsers and e-mail clients of your choice from the point where you need it most,. To assist you further it populates information about your contacts automatically for you. It even prepares a letter-template for you with the proper addresses filled-in when you decide to write a letter and use conventional snail mail. It also dials the telephone numbers for you when your modem is free.

You will be surprised with how much this free package can do for you. Through A1 Visual Contact® you can send e-mails, make telephone calls, access WebPages, write letters, maintain Fax numbers, maintain screen names for chat servers, print labels/envelopes for lettersall from a single source. It can also be used to print address books in customizable format. You can organize the output in a number of ways. It interfaces with the Netscape and Microsoft's browsers and e-mail clients. It uses your default word processor to prepare a pre-formatted letter template with sender's and receiver's information already filled-in.

If you have A1 Visual Contact® you don't need to buy a digital planner or expensive Scheduling Software. A1 Visual Contact® is the only software you will ever need. With all these features it still fits on two floppies.

Background

Communication has been a key issue ever since the birth of personal and business relationships. Communication media have continuously evolved over the passage of time. They have made their way from the traditional snail mail to telephony/faxes to the Internet. Snail mail requires location addresses. Telephony requires phone numbers while the Internet requires email addresses and URLs. Although each medium presents advantages of its own, it also presents the need for maintaining the contact information needed to bootstrap the communication.

Contact data is usually preserved in Address books. People use them to maintain home/business addresses and phone numbers. This book serves as the reference to hand print the address on to the envelopes or manually dial the telephone. Loss of this address book can be disastrous, as replacement of that information is not very easy. Furthermore, updating and changing this information may not be very easy.

Electronic data maintenance can solve these problems. The data can be maintained inside a centralized repository that can be easily replicated. Unfortunately, most of the applications used for this purpose have their own information storage schemes that are not portable across applications. Hence the user has to unnecessarily enter the contact information in multiple places and runs the risk of having outdated data in some of them.

A1 Visual Contact® aims to solve these issues by providing the centralized repository mentioned above. It does not force the users to change their favorite application, whether it is an email client, a word processor or a web browser. It maintains the contact information needed to invoke any of them and does so when asked. It stores the data in LDIF format, that can be readily used with LDAP, the Internet directory services standard. This allows import and export of data from any application that is LDAP compliant. By using A1 Visual Contact®, users can expect to get in touch with their contacts within a matter of seconds.

Details Specific to Current Release

This software interfaces with Netscape's and Microsoft's Browsers/e-mail clients, and uses your default word processor to assist you to write pre-formatted letters. The current version support imports from Outlook Express Address Book and Netscape version 3.x Address book. Future versions will support import/export from/to Netscape 4.x and Internet Explorer address books along with LDIF file formats to provide LDAP compatibility.

Releases 1.1x are completely re-coded and are expected to provide universal support for dialing.

Release 1.1x also provides a powerful tool for generating "Letter" Templates that you can use to format your letters the way you like.

Features

- **A1 Visual Contact® is your Contact Finder:** Find your contact through an alphabetically organized list. Organize this list based on First name or Last Name. Or if you prefer just use the general purpose powerful sub-string based "Search" facility to find who you are looking for.
- **A1 Visual Contact® is your Address Book:** Keep all the addresses (Office, Home, Vacation Home) next to the name of your contact. Easily locate addresses and use them directly to write letters.
- **A1 Visual Contact® is your Letter Writing Assistant:** Find your contact, click a button and start writing a letter, you will not have to format or fill in the receiver/sender addresses, the letter is pre-formatted for you. The formatting is customizable using a powerful letter template generator.
- **A1 Visual Contact® is your Phone Book:** For each contact, maintain as many telephone numbers as you like.
- **A1 Visual Contact® is your Personal Telephone Dialer:** Click just once to dial your contact. Use automatic re-dial feature if the number is busy.
- **A1 Visual Contact® is your Fax Book:** Maintain multiple Fax numbers of your contacts.
- **A1 Visual Contact® is your Buddies List:** Maintain multiple screen names for your contact.
- **A1 Visual Contact® is your Bookmarks List:** Maintain any number of Web page addresses (URLs) related to your contacts. Remember: your contacts can also be the companies.
- **A1 Visual Contact® Launches Browser of your Choice:** Click once to access the web page of your contact.
- **A1 Visual Contact® Is Your Organizer:** You can create any number of groups for your contacts. Send e-mails to groups.
- **A1 Visual Contact® Is Open:** Import and export from A1 Visual Contact's format to others formats and vice versa.
- **A1 Visual Contact® Is Simple to Use:** Export selected contacts by Drag N Drop.

Command : Export ...

Menu : File

Hotkey: None

Description: Export contacts from A1 Visual Contact's address book to other formats. The forthcoming dialog allows you to export the address book in the following three formats.

- 1.

Command : New

Menu : File

Hotkey: None

Description: Use this command to create a new address book in A1 Visual Contact.

You can open an existing document with the Open command.

Command : Open

Menu : File

Hotkey: None

Description: Use this command to open an existing address book.

0 You can create new documents with the New command.

Command : Automatically save changes

Menu : File

0 Hotkey: None

Description: Enable this option if you don't want the program to get a confirmation from you before saving the address book. When this option is disabled, A1 Visual Contact asks for such confirmation when you exit.

0 When this menu option is turned on the changes you make are saved immediately. When the option is turned off, A1 Visual Contact will remember all changes and will only save changes when you exit the application after confirmation from you.

- 1 You can create new documents with the New command.
- 2 And open an existing document with the Open command

Command : Save

Menu : File

Hotkey: Ctrl + S

Description: Saves currently displayed address book.

Command : Save As

Menu : File

Hotkey: None

Description: Saves currently displayed address book. Under a new name

Command : Import ...

Menu : File

Hotkey: None

Description: Imports Address Books from other programs into A1 Visual Contact® Address Book. Import Address Book Dialog shows you three options:

- A1 Visual Contact® Address book
 - Imports A1 Visual Contact® Address Book into the program. You can use it to restore a backup created earlier with Export commands. These commands can be located in the File menu as Export... and Export Selected Contacts... commands.

 - 0 This feature is provided so that user may copy another user's address book, or recover stored backup address book file.

- Netscape Navigator Address Book Format
 - Imports Netscape (3.02 and below) Address Book into A1 Visual Contact ®.
- Microsoft Outlook Express Address Book (Internet Explorer 4.0+ Address Book)
 - This command shows a message box describing the way how to import Microsoft Outlook Express Address Book (Internet Explorer 4.0+ Address Book) into A1 Visual Contact® application.

Command : Export Selected Contacts

Menu : File

Hotkey: None

Description: Use this command to export selected contacts from the A1 Visual Contact's address book. You can also use this command to drag N drop selected contacts to other applications. This command displays a dialog in which you can select contacts either by pressing the "Ctrl" key and clicking the contacts one by one, or by selecting multiple contacts by using the "Shift" Key. The selected contacts can then be dragged and dropped to ANY Word Processor, or Excel sheet.

The check boxes in the lower part of the dialog allow you to filter the fields that will be copied during this drag-n-drop operation.

All software packages that recognize simple text format (such as Notepad) and Rich Text Format (such as Microsoft Word, Word Perfect, Amietc) will accept information through A1 Visual Contact's drag-n-drop feature. Microsoft Excel is another example.

You can also export selected contacts into A1 Visual Contact® format. Click “Export in A1 Visual Contact® Format” button to export the selected contacts in A1 Visual Contact® format

Command : Autoload with Windows

Menu : File

Hotkey: None

Description: Automatically start A1 Visual Contact® when Windows is booted. If you see a Tick mark before this command, then A1 Visual Contact® will be launched automatically whenever Windows is started.

Command : Open another address book

Menu : File

Hotkey: None

Description: Use this command to load another address book. A1 Visual Contact® will launch another instance of the application with your previously saved file.

Command : Hide

Menu : File

0 Hotkey: Alt + F4

1 Description: Simply press Alt + F4 or select this command from the File Menu to hide A1 Visual Contact® Window when you no longer need it. A1 Visual Contact® can still be activated from the system icon tray located in the lower right hand corner of your screen.

Command : Print Preview

Menu : File

Hotkey: None

Description: You can use this command to see a print preview of the address book before you actually print the address book. (This option is not available in the Freeware Version).

Command : Print

Menu : File

Hotkey: Ctrl + P

Description: This command prints the information about your contacts on the printer. A dialog allows you to select the fields that you would like to print and press "OK" to print the contacts (This option is not available in Freeware Version).

Command : Exit

Menu : File

Hotkey: None

Description: Exit the program.

Command : Copy

Menu : Edit

Hotkey: Ctrl + C, Ctrl + Ins

Description:

- When the cursor is in a field, this commands copies the selected text.
- When a Contact has been selected (dark shaded) in the Address Book View, it copies the selected contact from the Address Book View in the left pane. The entire copied contact can then be pasted in another application such as Notepad, Microsoft Word (and other word processors), Microsoft Excel.
The entire copied contact can also be added to a selected group.

Command : Paste

Menu : Edit

Hotkey : Ctrl + V, Shift + Ins

Description :

- When the cursor is placed inside one of the edit boxes in right pane, this command provides the regular paste functionality.
- When an a Contact has been selected (dark shaded), it pastes the copied contact into the selected groups. This command is enabled only when a valid A1 Visual Contact's contact has already been copied with the Edit | Copy command.

Command : Find

Menu : Edit

Hotkey: Ctrl + F

Description: Finds a particular contact in the Address book with specific attributes. In the forthcoming dialog, you can enter a search sub-string and choose the fields based on which you wish to perform the search. On clicking the *Find Next* button, the view will scroll to the searched contact and show the contents of that particular contact in the right pane.

How to organize your contacts in A1 Visual Contact

Detailed help for organizing your contacts.

Tip of the day

Welcome to A1 Visual Contact® . This window is designed to provide you with handy tips when you open the application. You can turn them off by de-selecting “Show tips at startup” entry in the help menu. If you are a beginner, it may help you a lot to understand the potential functionality of A1 Visual Contact®.

Email Clients

A1 Visual Contact® offers you a choice of Email clients. At this time, The following Email clients are supported

1. System default Email client
2. Microsoft Outlook Express
3. Microsoft Outlook 97/98
4. Netscape 3.0
5. Netscape Communicator 4.04 or higher

If you choose default Email client option and you don't have any Email client launched in your system, the Windows will run Email client setup wizard.

Address Book View

0 The Address Book View of the A1 Visual Contact® contains contacts in the form of a Address Book View organized alphabetically under the nodes that show A B C icons on them.

Selection

Whenever a node in the Address Book View is selected the related information is filled in the right pane of the window.

0 If the node is an empty alphabetical node such as A, B, C etc, all the controls in the right pane get emptied and the program gets ready to enter a new contact.

1 If the selected node is a contact name such as “Kevin Costner”, information about Kevin Costner will be filled-in in the controls in the right pane of the window.

2 If the selected node is a group, some of the controls in the right pane become invisible and a list box appears that contains the list of the contacts that are currently added into this group.

Context menus in the Address Book View

When a contact is selected and right mouse button is clicked on it, a menu appears which contains frequently used commands such as :”Dial”, “Email”, “Delete”, and “Create new group”,.

0 Another sub-menu that is the last popup in this menu is “Add : Contact. name” into group” This menu is filled with the group names that are contained in your address book. Adding your contacts in groups is very easy. Simply right click the contact and choose this popup menu and click on the group name in which you want to add this Contact.

Drag N Drop

Another feature you see in this Address Book View is Drag N Drop. You can drag contacts and drop them in ANY word processor to export your contacts.

0 You can also drag a contact and drop it on a group name to add this contact in that group.

If this option is chosen, A1 Visual Contact® will launch system default Browser when Visit Web site is selected from Commands menu.

Type the browser's Executable file's path here, including the filename. If you have chosen the default Browser you don't need to enter path here, this edit field will be grayed in this case.

If this option is chosen, A1 Visual Contact® will launch Internet Explorer when Web command is selected from Commands menu.

If this option is chosen, A1 Visual Contact® will launch Netscape Navigator or Netscape Communicator (whichever is available/installed on your system) when Web command is selected from Commands menu.

When Web command is selected from Commands menu A1 Visual Contact® will launch the browser that you will choose after choosing this option.

When you double click a group, A1 Visual Contact® will send launch Edit group dialog so that you may Add/Remove contacts from the group.

You can easily export the selected Contacts from A1 Visual Contact® address book to any application like MS Word, MS Excel, Word Perfect, and other text editors by using “Export Selected command from the File menu. First select the contacts that you want to export then drag them with mouse and drop them into your target application.

Export A1 Visual Contact® address book into text format.

Export A1 Visual Contact® address book in its own format. This command can be used to backup your data, or to carry your data with you.

[Click to see our sponsors.](#)

[Click to see the legal stuff, disclaimer and warranty information.](#)

Choose this to use Netscape Navigator Gold as your A1 Visual Contact® default Email client.
A1 Visual Contact® will launch Netscape Navigator Gold Email client when you will give Send Email command in Visual Contact.

Note: New versions of Netscape are now available free and it is recommended to upgrade your Netscape program to Netscape Communicator 4.05

Choose this to use Netscape Communicator 4.05 as your A1 Visual Contact® default Email client.
A1 Visual Contact® will launch Netscape Communicator 4.05 Email client when you will give Send Email command in A1 Visual Contact.

Choose this to use Microsoft Outlook 97 or Microsoft Outlook 98 as your default email client software. A1 Visual Contact® will launch Microsoft Outlook 97 or Microsoft Outlook 98 Email client when you will give Send Email command in A1 Visual Contact.

Choose this to use Microsoft Outlook Express as your default email client software. A1 Visual Contact® will launch Microsoft Outlook Express Email client when you will give Send Email command in Visual Contact.

You can easily import MS Outlook Express address book into A1 Visual Contact® by selecting all contacts from Outlook Address Book, dragging them with left mouse button and dropping them onto the window in A1 Visual Contact. The dropped contacts will appear in the Address Book View.

Choose this to import Netscape Navigator 3.0 Address Book into A1 Visual Contact® address book.

Choose this to import A1 Visual Contact® address book into your current address book. You can export A1 Visual Contact® address book by two ways.

1. Choose ***File Export*** and then choose A1 Visual Contact® format
2. Choose ***File Export Selected Contacts***, select the contacts you want to export, then press “Export in A1 Visual Contact® format”

Important Note: These commands can be used to backup your existing data to floppy disks, or carry your address book to other machines.

Edit group name here. Make sure that you don't type a name that already exists.

Click this button to add the selected contact in the current group.

Click this button to add all of the contacts in the current group.

Click this button to create a new group.

Click this button to remove the selected contacts from the currently selected group.

Click this button to delete the currently selected group.

Click this button to remove all of the contacts from the currently selected groups.

This combo box shows a list of the current groups in the address book.

Shows the list of available contacts. While pressing the "Ctrl" key click on multiple contacts to make a multiple selection. You can also double click a contact to add it in the currently selected group.

Shows the list of contacts in the selected group.

Export the selected Contacts

in a file in A1 Visual Contact's format. This command can be used to accomplish two things.

1. To make backup of your existing data.
2. To carry your address book with you when you are on the move.

Dial operation failed because the number you dialed was busy. Click the “Redial” button to redial the number again.

Check this box on to enable auto-dialing feature. A1 Visual Contact® will wait for the specified number of seconds and will then re-dial the number when the time interval is over.

Enter dialing interval in this edit box, or click the up and down arrows (spin control) to change the time interval.

Enter dialing interval using the up and down arrows (spin control) to change the time interval for redialing the number which was found busy.

How to Manage Multiple Entries in A1 Visual Contact®

A1 Visual Contact® provides interface for managing multiple entries for Phone numbers, Fax numbers, Email addresses, Internet URLs and Postal addresses.

Adding Multiple Entries

0 You can enter a multiple entry for any of the fields by using one of the following methods.

1 1. Use menu commands in the Edit menu under the submenu “Add another entry in “

Voice

0 Fax

1 Email

2 URL

3 Address

2. Type the additional entry for the corresponding field in the corresponding edit field and press the Enter key.

Removing an Entry

Deleting an entry for any of the fields is quite simple by using one of the following methods.

0 1. Use menu commands in the Edit menu under the submenu Remove Entry From

Voice

0 Fax

1 Email

2 URL

3 Address

2. Empty the edit field for the corresponding field (select all of the text in the edit field and press the Delete key) and press Enter.

How to Dial a contact

The Voice numbers you store for the contacts can be dialed by

0 1. Pressing Dial button in the main window or by the menu command Command ⇒

Dial

1 2. Clicking the contact in the Address Book View window with right mouse button and selecting the command “Dial <User Name>”. If the contact has multiple contacts stored for Voice number, you will see a list of all these numbers in this menu. Select the number you want to dial and click on it.

2 When a group is selected in the Address Book View, the right pane of the window shows a list of the contacts. You can dial the contact by clicking the right mouse button for any of these contacts.

How to send Email

Sending Email to a single Contact.

Select the contact in the Address Book View and click Send Email button or use menu command “ Command ⇒ Send Email” to send Email to the selected contact.

Sending Email to a group of Contacts

If you have not already created a group, create a new group and add contacts in this group. (How....). Now select the group in the left pane of the Window (Address Book View) and click “Send Email button or use menu command “ Command ⇒ Send Email” to send Email to the selected contact.

0 You can send Email to subset of contacts in a group by holding Ctrl key and clicking contacts in the list box in the right pane of the application’s main window and pressing “Send Email” button.

1 You can always choose the Email client from the menu command “Options ⇒ Email Client and Browser Configuration”

How to visit contact's WebPages on the Internet

Click the button "URL" before the edit field for URL in the application's main window or Choose the menu command "Command ⇒ Navigate this URL on the Internet".

0 You can always choose the Internet Browser software from the menu command "Options ⇒ Email Client and Browser Configuration".

How to Write Letters to your contacts using A1 Visual Contact®

Click the button “Address” before the address selection combo box in the applications main window or choose the menu command “Command ⇒ Write Letter”

How to Backup your address book data

You can backup your existing data by the command "File ⇒ Export..." command. Choose Export in A1 Visual Contact® format in the dialog and press Ok. Select the target filename and location and click the "Save" button in the File Save Dialog.

How to Use the same address book on your portable computer and home PC

You can carry your data with you on your portable computer by exporting the address book with “File ⇒ Export...” command. Choose Export in A1 Visual Contact® format in the forthcoming dialog and press Ok. Select the target filename and location and click the “Save” button in the File Save Dialog. You can specify the target location on your portable computer (if it is connected with your computer via serial port) or copy the address book to a floppy and then copy it on to your portable computer.

How to Import other address book formats in A1 Visual Contact®

Currently two famous and widely used Email client applications are supported.

0 1. You can import Netscape Navigator's (version 3.x) address book into A1 Visual Contact ®. Choose "File ⇒ Import ..." and choose Netscape Navigator Address Book format.

1 2. You can also import Microsoft Outlook Express (Internet Explorer 4.0+) address book into A1 Visual Contact®. Select all (or some) contacts in the Outlook Express address book and drag N drop it on the Address Book View of A1 Visual Contact® with the Left mouse button. If the contacts already exist, A1 Visual Contact® will prompt you to keep the existing contacts or replace them.

How to Export data from A1 Visual Contact® to other applications

You can export A1 Visual Contact® Address book into Text format, Microsoft Word, Microsoft Excel, and all other famous word processors like AmiPro, Word Perfect and Word Pad.

0 Select the contacts in the File ⇒ Export Selected Contacts dialog , drag them and drop them into the target application's main window. You can optionally choose the fields which you need (or don't need) to export by clicking on the check boxes in the export selected contacts dialog.

Tasks: Working with groups

Creating and Editing groups

Choose command “Commands ⇒ New Group...” or press Ctrl + G key to activate the “Create new group” dialog. Type the name of the new group and click Ok button.

0 Now you will see an empty list in the dialog. In the Contacts list, double click the contacts you want to add in the newly created group. Double clicking a contact in the group list removes it from the group.

1 If you want to create more groups or delete existing ones, click on “Create New Group” or “Delete this group” buttons in the same dialog.

Right mouse click options for groups

When you click the right mouse button on a group, a context menu pops up showing different commands that can be used on the selected group. With these commands you can Edit the group, Send Email to all of the contacts in the group, or delete the group.

Double Click options for groups

You can choose the “Options ⇒ Double Clicking Options...” command to change the double click option for the groups. You can selectively choose to initiate Group Editing dialog, or send Email to the selected group.

When you choose this option, A1 Visual Contact® will dial the contact (if the contact has a voice number stored in A1 Visual Contact® address book) when you will double click a contact in the Address Book View of the application.

When you choose this option, A1 Visual Contact® will send Email to the contact, when you will double click a contact in the Address Book View of the application.

When you choose this option, A1 Visual Contact® will launch Internet Browser and take you to the contact's WebPages on the Internet, when you will double click a contact in the Address Book View of the application.

When you choose this option, A1 Visual Contact® will launch default Word Processor and will let you write a letter to the contact, when you will double click a contact in the Address Book View of the application.

When you choose this option, A1 Visual Contact® will launch Email client software and will let you send Email to the selected group.

When you choose this option, double clicking a group will let you initiate MS Word Mail Merge Macro.
Important: This command has been disabled in the freeware version of the A1 Visual Contact®.

Register your free copy of the A1 Visual Contact® Application

Thanks for using A1 Visual Contact®. A1 Visual Contact's evaluation version is free and you can use it as long as the professional version is not launched. The Professional version will be available soon with free updates for one year. This version will contain a lot of new features with powerful printing support.

To enter your name in our users' address book send us an email with Subject "Register A1 Visual Contact®". We will keep you informed about new releases and enhancements in the product.

Registration will help you to keep informed about new software releases and updates. We will not charge you a single penny until you decide to buy the professional version of the program. The professional version will come with free updates for a full year.

If this option is chosen, A1 Visual Contact® will launch system default Email client software when Web command is selected from Commands menu.

If this checkbox is checked, A1 Visual Contact will add “HTTP://” in every URL that is stored in the contact information. If you yourself add this tag for every URL and want to view web pages saved on your computer’s hard drive then you must turn it off.

Creates a new Dial up networking connection. All Visual Contact uses Dial up networking to dial the telephone numbers. Click this button to create a new dial up connection. In the forthcoming wizard, please type "VC" in the name field of the connection. Fill in any information in the rest of the fields in the wizard, they are not important. You can however choose to select a particular modem if you have more than one modems installed in your system in this dialog.

Shows a list of currently opened connections. Choose the connection which you want to use for dialing in this list box and click “Disconnect and Dial” button.

Click this button if you want to cancel the dialing operation.

When dialing is complete, pick up the hand set receiver and click this button and start talking.

You have chosen Auto Save option in File | Address Book menu. If this option is turned on, AI Visual Contact will save the changes dynamically. Now when you have created a new address book, you must save it under a valid name. You already canceled this operation. To continue using the auto save feature you must click “Save Now” button and save the address book. If you want to cancel the automatic saving, you must click “Save Later” button.

#You have chosen Auto Save option in File | Address Book menu. If this option is turned on, Address Book will save the changes dynamically. Now when you have created a new address book, you must save it under a valid name. You already canceled this operation. To disable the auto save feature, click this button, you will not be asked again to enter a file name until you explicitly issue the Save or Save As command.

Checking this check box on will make the dialog not show up the next time.

Shows context message.

Shows a list of available templates. Choose one and A1 Visual Contact will use it for letter writing. You can define new templates using Options menu command “Define Letter Templates” or by clicking “New template” button next to this combo box.

Click this button to define a new letter template. Save this template in “Tmplates” folder. The "Tmplates" is in the folder where you installed A1 Visual Contact. The saved template will be available for use the next time you write a letter using A1 Visual Contact.

Contact

Complete information about a contact is called a “Contact” in A1 Visual Contact. You see contacts in the left pane of the main window which A1 Visual Contact refers to as “Address Book View”

Enter the Word Processor's Executable module's path in this edit box. You can also browse the file by clicking the Browse button next to this edit field.

Click this button to browse the custom word processor's Executable module.

Choose this option if you do not want to use default RTF word processor installed on your system. You will have to enter the word processor's path in the edit field below this radio button.
[Note: This option is recommended only if A1 Visual Contact is unable to initiate your default word processor with proper fields already filled in.]

This is the default option for writing letters in A1 Visual Contact. A1 Visual Contact will launch your system default RTF word processor to help you write the letters.

Click this button to rename the selected group.

Changes the color of the selected text in the template preview window.

Click this button to delete the selected template.

Click this button to end editing.

Click this button to save changes that you have made while editing the current template

Click this button to save the currently selected template under a new name.

This Drop Down List shows a list of fonts. Make a selection of the fields in the preview window and choose the font you want to use from this list.

With this combo box, you can change the font size of the selected fields. You can also change the size by typing a size (e.g. 12,13,28 etc) in the edit portion of this combo box and pressing enter key.

This Drop Down List shows the list of available templates. Choose the template you want to change and it will be shown in the preview window above this drop down list.

Click this button to change the selected fields' formatting to **bold**.

Make the selected paragraphs bulleted.

Click this button to change the selected fields' formatting to *Italic*.

Click this button to change the selected fields' formatting to Underline.

Click this button to change the alignment of the selected paragraphs or the current paragraph to center aligned.

Click this button to change the alignment of the selected paragraphs or the current paragraph to left aligned.

Click this button to change the alignment of the selected paragraphs or the current paragraph to right aligned.

Click this button to see the disclaimer and license agreement notice.

Edit the number to be re-dialed in this edit field.

Click this button to make another entry with the same name.

Click this button to discard the current operation.

Copy the selected contacts onto the clipboard. These contacts can then be pasted into other applications such as MS Word, MS Excel or other word processor software programs.

Click this button to change the format of the print out. Available formats are Tabular format, Cards, Envelopes and mailing labels.

Click this button to preview the print out before it gets printed.

Click this button to directly print the document without previewing it first.

Click this button to change the printer, page size and orientation of the paper.

Click this button to select all of the contacts in the currently selected group or the whole address book, if no group is currently selected.

This Combo Box shows a list of available fonts installed in your system. Choose one of the fonts in this combo box and it will be used for printing the address book.

This Combo Box shows a list of groups in your address book. When you select a group, all entries in that group are automatically selected. You can also highlight a group in the address book view and press Ctrl + P or choose File | Print command to print a particular group.

Change the size of the base font for the address book. The headings will be printed in **Bold** and the rest of the fields will be printed in regular font. Same size will be used to print the whole address book.

Turn this check box on to include **Address** field in the print out.

Turn this check box on to include **Email** field in the print out.

Turn this check box on to include **Fax Number** field in the print out.

Turn this check box on to include **Notes** field in the print out.

Turn this check box on to include **URL** field in the print out.

Turn this check box on to include **Voice Number** field in the print out.

Click this check box to print out a table across the table.

Click this check box to select a particular group for printing.

This list control shows a list of the contacts in the address book. If a group is selected, this list shows the contacts in that particular group.

To select multiple contacts in this list box do one of the following

- Press Control key and keep it pressed and then click the contacts with mouse left button one by one.
- OR Select a contact, press Shift key (keep it pressed) and click on another contact. All the contacts between both of the contacts will be selected.
- OR Hold the mouse left button pressed while clicking anywhere in the list control and drag the mouse. All the contacts within the bounding virtual rectangle created by mouse motion will get selected.

Changes the alignment of the text in the printed table or list to **Center**.

Changes the alignment of the text in the printed table or list to **Left**.

Changes the alignment of the text in the printed table or list to **Right**.

Closes the dialog.

If you turn this on, A1 Visual Contact will save window state (minimized/hidden in system icon tray/ or maximized). If you had A1 Visual Contact in minimized state when you closed the program (using right mouse button context menu) or shut down Windows, A1 Visual Contact will start hidden in System icon tray, the next time you will start Windows or run the program. If you turn this off, A1 Visual Contact's window will always be shown as a normal window.

This option is only enabled when we have chosen to print in Tabular format. Each new alpha section will start on a new page if this check box is checked.

Check this on to print field labels with the fields. Such as a contact having a name "John Doe" and a voice number "1234567" will be printed as

Name : John Doe

Voice : 1234567

Mail Merge module is still under development

Though printing envelopes with A1 Visual Contact is a cool job, some people still like to use Microsoft Word Mail Merge. Click “Mail Merge” button in this dialog to export the selected entries in a comma delimited text file which will then be used by MS Word to create mail merged document.

Click this button to enter the return address for your envelopes. This address will be used in the envelopes. You will only have to enter this information once and the program will save it for the future.

Click this combo box to choose font for the return address.

Click this combo box to choose font size for the return address.

If you select this option, the program switches mode to Phone Dialer. Double clicking on the contacts in the Address Book View will dial the contact's telephone number on your telephone.

If you select this option, the program will switch mode to Email Assistant. Double clicking on the contacts in the Address Book View will initiate your selected Email client with the address information filled in , in the TO field of your Email message.

If you select this option, the program will switch mode to Web Browsing Helper. Double clicking on the contacts in the Address Book View will initiate your selected Internet Browser Software with the URL information filled in , in the URL field of your Internet Browser.

If you select this option, the program will switch mode to Letter Writing Assistant. Double clicking on the contacts in the Address Book View will initiate your selected Word Processor with a predefined template for the letter you will write. You can always define new templates using Options | Define Letter Templates Command.

Working with Quick Keys

Quick keys are shortcuts to your contacts. They behave just like the speed dial buttons on your telephone with programmable keys that you program for phone numbers that you dial frequently.

A1 Visual Contact carries this concept further.

In Freeware version you can have two, and in Professional version you can have up to 1000 quick buttons. Programming is very simple -- just drag-N-Drop the contact you want to program from your address book view of A1 Visual Contact. Checkout **Commands | Customize quick keys** menu command to customize the quick keys.

A1 Visual Contact allows you can have separate quick keys for dialer, email assistant, web browsing assistant, and letter writing assistant.

To Create a quick key, just drag the contact and drop it in the quick key view.

To delete a quick key, hold down the CTRL key (keep holding this key) and click the quick key with left mouse button.

You can also create and delete quick keys using **Commands | Customize quick keys** menu command.

Note: In Freeware version only first two keys will be functional, to get them all working, please buy the registered version. ([How to buy registered version?](#))

How to buy A1 Visual Contact Pro

A1 Visual Contact Pro is available for US \$25. It can be ordered on-line or by Telephone using credit card:

https://www.regsoft.com/cgi-bin/reg_it_offsite.pl?10029=REGSOFT

It can also be obtained by sending a check or money order.
The benefits of paid subscription include:

1. No advertisement banners.
2. Up to 1000 programmable Quick Keys.
3. Printing support. Freeware version will never support printing.
4. Free upgrades for one year after date of purchase.

After receiving payment, electronic copy will be e-mailed to you promptly. The size of e-mail will be about 2 M bytes.

If you can not receive attachments for any reason or you prefer to obtain software on a Floppy, please add additional \$5 for shipping and handling to your order and we will promptly ship it to you.
