What is Drag And File

Drag And File streamlines and simplifies the work of managing files under Windows 95 and Windows NT. It offers several unique functions, such as a directory finder, a duplicate file finder and a DOS command utility.

Drag And File works at several levels of sophistication and integrates with other management and utility programs. The result is an uncommon degree of flexibility: Drag And File can be configured to meet your needs, your working style, and your experience. When you need more, Drag And File delivers. Unlike most other Windows file managers, Drag And File allows you to highlight individual files and tag

multiple files, which makes possible batch operations on non-contiguous groups of files. Drag And File offers a broad range of file management tools:

Drag-and-drop file move, copy, and delete

Viewing of all text and most graphics files

Tree and branch batch operations on all files

Single click execution of most frequent tasks from a toolbar, including viewing

Separate windows for each drive

Full configurable hot key control for hands-on keyboard execution

Formatting and diskcopying for floppy diskettes

Full access to the Windows 95 Shell functions like creating shortcuts, Quick View and file properties.

Drag And File displays a window complete with toolbar and menu choices for each drive selected. You may open up to 12 drive windows simultaneously.

The entire program can be run from a single small Drivebar which floats unobtrusively on your screen. The Drivebar makes complete directory and file information just a mouse click away.

Drag And File includes an Uninstaller to remove the program and changes made during installation. **Note:** Microsoft Windows' file-handling requirements may make it necessary for you to delete the uninstaller file itself.

User Help Drag And File is designed to present options and procedures clearly. The window components, including icons, graphic and text buttons, and directory tree displays, make evident what to do and how to do it.

Along with ease of use and the ordinary features of file management, Drag And File offers an unusual degree of sophistication.

Canyon Software is committed to producing software that is useful and productive. To help users make full use of Drag And File, Canyon Software maintains a technical help line for registered users from 8:30 AM to 5:30 PM Pacific Time.

Options/Settings

From the Options menu you access the Fonts and Settings dialog boxes, which allow you to adjust several aspects of the program's performance and display.

To change fonts:

1. Select Fonts from the Options menu.

The Fonts dialog box displays. Available fonts are those which are installed under Windows, or under a type manager working with Windows. 2. Make whatever changes you wish and click OK.

The changes take effect immediately and remain when you exit the program. To change Settings:

1. Select Settings from the Options menu.

The Settings dialog box displays. The Settings dialog box has three pages for configuring Drag And File Options. In addition if you have our programs Drag And Zip or Drag And View Gold installed, there will be pages for configuring them too. You select a page by clicking the mouse on one of the tabs at the top. The first page is for general settings.

2. Enter your choices for warnings, multiple windows operations and window appearance, file delete and editor.

Overwrite Warnings. When enabled, these warnings appear when the files you are copying or moving are about to overwrite files of the same name. These warnings can always be overridden at copy or move time. File Delete. When checked, files deleted in Drag And File will be send to the RECYCLE BIN. When not checked, you will have to use an undelete program to recover deleted files. This option may not work on earlier builds of Windows 95. We know that it works on bulds 474 and greater. This option is not available when running under Windows NT.

Multiple Window Operations. Drag And File lets you perform operations on tagged files in more than one window. These choices allow you to specify which operations you would like to perform in multiple windows.

When Copy from multiple windows is checked, Drag And File will perform all file copy operations on the highlighted file or the tagged files from all open Drag And File windows.

When Move from multiple windows is checked, Drag And File will perform all file move operations on the highlighted file or the tagged files from all open Drag And File windows.

When View files from multiple windows is checked, and you choose the view files option from the Drag And File tool bar or the "Actions" menu, Drag And File will view the highlighted and tagged files from all open Drag And File windows.

When View directories from multiple windows is checked, and you choose the view directories option from the Drag And File tool bar or the "Actions" menu, Drag And File will open up a view window with the listing of all the files in the highlighted and tagged directories from all open Drag And File windows.

When Drag and drop from multiple windows is checked, all drag and drop operations to other programs include the tagged files or highlighted file from all Drag And File windows. Drag And Drop operations to toolbar buttons will depend on the configuration for the action of the particular button. For example, if you have Drag And File configured to copy from only the active window, dragging files to the copy button will only work on the active window no matter what you have configured for drag and drop.

When Zip file from multiple windows is checked and you click on the zip button on the toolbar, the highlighted file or the tagged files in all the open Drag And File windows will be put in the resulting Zip file.

Window Appearance. These choices follow the pattern for Microsoft Windows: cascaded windows are overlapped slightly, and tiled windows are fully visible.

Editor. Enter your editor of choice in this field and you can edit a highlighted file when you choose the edit file option.

3. In the drives page you can configure the drives that are available to Drag And File. This is particularly useful on networks where you might want to limit the drives available to different users. The settings in this dialog box will be reflected in both Drag And File and the Drag And File Drive Bar.

Select the drives that you want to have available. To make drive selection easier, there are check boxes where you can turn on or off the different drive types. Drives that have been selected will be displayed below the drive list box. {bmc help3256.bmp}

DOS Command Page

4, You can turn on Drag And File's DOS Command Line by choosing Show DOS Command Line from the Options menu. In this page you can set the DOS command Line defaults.

DOS In Window: You can run most DOS commands with the SmilerShell Lite and can choose to have these commands run full screen or in a DOS window. The default is to run the commands in a DOS Window.

Inactive DOS Windows Stay Visible: This options determines whether the DOS windows will stay around or close after DOS commands are run. If you choose to have the DOS windows stay around you can easily close them all at once by pressing Ctrl+Shift+K from the keyboard.

Insert Mode: Use this to toggle between Insert or Overtype mode

Use Comspec: By default, the DOS command utility, will send all DOS commands to the standard DOS command processor, COMMAND. COM. Some programs like 4DOS, NDOS and others use a different command processor. They specify the command processor in your CONFIG. SYS file with the statement "comspec=". If you choose to have SmilerShell Lite use the command processor specified in your CONFIG.SYS file, see that this item is checked. Inorder to see this option take effect you will have to restart Drag And File. This is only necessary with the Use Comspec option.

Configure Toolbar

Drag And File's button toolbar is very easily modified allowing you to add and delete different buttons. Programs can also be added to toolbar buttons. All toolbar buttons can be configured to user Alt or Ctrl key combinations as hot keys. Alt hot keys are shown in the lower right of the button as black on gray. Ctrl hot keys are shown as white on black. There is also an option to completely hide the toolbar. If the toolbar is hidden, the configured hot keys are still active.

To modify the toolbar:

1. Choose Customize Toolbar from the Options menu.

The Toolbar Customize dialog appears: In the list box on the left appear the available button choices. The top two entries are SEPARATOR and NEW PROGRAM. SEPARATOR adds a space between two buttons. NEW PROGRAM allows you to install a program as a button choice. In the list box on the right appear the buttons that are currently part of the toolbar along with their hot keys.

To add a new button

1 Select the position in the Toolbar buttons list box where you want the button to appear. The new button will appear before the selected button. You can also drag buttons in the Toolbar buttons list box to modify their position.

 Select the button that you want to add from the Available buttons list box. You can also choose SEPARATOR or NEW PROGRAM. If a command button is already in the Toolbar buttons list box, it won't be in the Available buttons list.
Choose Add or drag the button to the right hand list box. The button will be added. To remove a button

1. Select the button that you want to remove from the Toolbar buttons list box. Click on Remove or drag the button to the left hand list box. The button will be removed.

To add a program

1. Select NEW PROGRAM and choose Add. The Add Program dialog will appear.

{bmc help0011.bmp}

Add Program dialog box

2. Browse through the directories and files and pick the program that you want to associate with the button. If you want the file that's currently highlighted to be launched with the program check the Launch Highlighted File With Program box. When the mouse cursor is over any of the toolbar buttons, a little window will come up saying what the button does. You can enter a custom button description in the Button Description field. If no description is entered, the program name will be used.

3. Choose OK and the button will be added to the Toolbar buttons list box. If the program has an embedded icon like most Windows programs, that icon will be placed on the button.

To modify a program button

1. Highlight the button in the Toolbar buttons list box. Choose the Program button and the Add Program dialog will appear. Follow the directions for adding a program.

To add or change a button hot key

1. Highlight the button whose hot key you want to change or add. Select the letter of the hot key that you want to use from the drop down list box in the lower right of the Customize Toolbar dialog box. Choose Alt or Ctrl if you want the hot key to use the Alt key or the Ctrl key.

When you are finished making changes to the toolbar, choose OK. All changes will be saved and windows updated. If you choose a hotkey that is already in use, you will be warned before saving the new hot key.

About the Drivebar

Though small and unobtrusive, the Drag And File Drivebar can provide access to all your Drag And File functions.

The Drivebar consists of a floating bar containing buttons which represent your drives, removable and fixed drives, local and networked, and a control bar. Click on a drive button to open a new drive window. Click on the control bar to open a menu with choices to control the Drivebar display and to close all open Drag And File windows. The DF Drivebar normally floats in the foreground, above whatever application is current.

Using the Drivebar

To activate the Drivebar, open the Drag And File group window from Program Manager and click on the DF Drivebar icon.

Configuring the Drivebar

The Drivebar can be altered to fit your needs. To configure the Drivebar:

1. Click on the control bar in the upper left corner of the DF Drivebar icon bar.

The control menu appears.

{bmc help0014.bmp}

Drivebar control menu

2. Click on Display Vertically (or Display Horizontally) to select the configuration other than the one currently in effect.

3. Click on Always Visible to make the Drivebar appear on top of other programs.

4. Click on Close All Drag And File Windows to close all open Drag And File drive windows, but leave the Drivebar icon visible. 5. Click on other choices as needed to Move, Close, open a Help window, or to see information about the Drivebar.

Drag And File Main Window

The Drag And File window is divided into several functional and information sections. Drag And File can open up to twelve windows simultaneously. The menu bar contains drop down menus. They are accessible with a mouse or directly from the keyboard by using the Alt key in combination with the underlined letter or arrow keys.

The information sections contain data about the drive currently displayed, number of directories on this drive, the space remaining on the drive, the files in the selected directory, and their total size. The drive buttons allow you to choose which drive information the open window displays. Double clicking on the icon of the currently displayed drive opens a second window displaying that drive.

The lower half of the window is divided into two panes: information in the left pane concerns directories, and information about files appears in the right pane.

Choosing files and directories

Drag And File, slightly differently from Microsoft Windows File Manager, and Windows 95 Explorer.

Drag And File marks files and directories by highlighting, tagging, and dotting.

• Highlight files and directories by left clicking on them with the mouse, or by using the arrow keys to move the highlight bar up or down over a listing. Only one directory or file can be highlighted at a time. Operations like Copy or Move can be performed on a highlighted file by clicking the appropriate tool, or by using drop down menus or keyboard shortcut keys. If any files are tagged, highlighting is ignored.

Tag and untag files or directories by several methods:

Ctrl+Left Mouse Button will tag or untag a file. A tagged file has a red arrow to its left.

Ctrl+Left Arrow or Slash tag all files or directories Right arrow to tag; left arrow to untag. (This method is not available when viewing filenames only)

Spacebar and Ctrl-Right click to toggle tagging on or off.

Ctrl+Right Arrow or Ctrl+Slash untag all files or directories

Dots mark files which have been copied. Dotted files may be reselected as a group for other operations.

Menu Bar

The menu bar contains the headers for the main drop down menus. Most menus include information about shortcut key combinations to activate commands from the keyboard. Drag And File includes in its menu bar extensions³/₄drop down menus inserted in the File Manager's menu bar by utility and other programs.

Drive bar

The drive bar includes buttons that represent all accessible drives. Click on a drive button to change to that particular drive. Double click on a drive button to open a new Drag And File window for that drive. Additionally, files can be dragged to the drive buttons for copying or moving. In Windows 95 you can right click on a drive button to bring up a context menu. From this context menu you can access the drives sharing, format the drive, create a shortcut or access the drives properties.

Toolbar

The toolbar displays a series of buttons that activate tools or shortcuts.

Directory Pane

The directory pane displays, in a tree format, all directories and subdirectories of the currently selected drive.

File Pane

The file pane displays a list of the files and their attributes contained within the currently selected directory or subdirectory. If you are viewing all file details (the default view) there will be a Caption Bar over the file listing.

{bmc help3202.bmp}

You can drag the boarders of some of the sections to resize the colums. When you click on the heading buttons you will sort the file list in the order of the button legend. One click will sort ascending. The second click will sort descending.

Type to File/Directory function

To locate a specific directory or file, when the appropriate pane is active, start typing the name of the directory or file. Your typing appears in a small window that opens over the directory count in the lower left corner of the window, beneath the directory pane. As you type, the highlight bar will move to the directory or file which most closely approximates your typing.

Drag and drop functions Drag And File uses all the mouse conventions associated with Microsoft Windows programs. When you drag and drop files and directories with the left mouse button to a directory or drive button, a dialog box opens. Using options in the dialog box you can specify a Copy or Move operation, the name of the file or directory, and use a browse feature to specify the path. When "Drag and drop from multiple windows" is turned on in the settings dialog, all drag and drop operations will use the highlighted or tagged files in all open Drag And File windows.

Files or directories can also be dragged to toolbar buttons.

When you drag and drop files and directories with the right mouse button under Windows 95, a context menu will popup allowing you to copy or move the files or creeate a shortcut to the files.

Toolbar functions

Drag And File's toolbar contains buttons which make the most common file management tasks easily accessible. Functions and programs can be added to or deleted from the toolbar by choosing Options/Modify Toolbar

Using The Keyboard

Drag And File allows you to access most functions directly from the keyboard as well as use the mouse to select functions from a drop down menu. All buttons can have Alt or Ctrl key combinations assigned to them.
