

PACIFIC CD INFORMATION FILE

This CD contains three separate CD titles. If you have Island Girls 3CD the CD titles included are:

Island Bikini Beach
Island Photo Studio
Island Art Gallery

If you have Local Girls 3CD the titles included are:

Local Bikini Beach
Local Photo Studio
Local Art Gallery

We also have other current and new titles in production and we can be reached at:

Pacific CD
P.O. Box 31328
Honolulu, Hawaii 96820

All material in this CD is covered by World-Wide Copyright and may not be distributed in any other form than this CD. We do not authorize manufacturing under any other means or label than the Pacific CD label at the address above.

Operating Requirements-

To run the multimedia portions of this CD you need:

1. A color monitor that displays 640 x 480 in 8-bit (256 colors).
2. A sound board or sound chip inside your computer that can play 11K mono sound/music.

For Macintosh Users:

The multimedia shows were produced and tested on standard Mac II level machines and should work nicely. They may work fine on other Mac platforms such as the Classic or the Powerbooks, but we haven't tried it ourselves at this point in time. 24-bit displays may require setting to 8-bit mode. Our shows were designed with 8-bit PICT files using system palettes.

For MS-DOS and MS-Windows Users:

The MS-DOS shows run the best on your computer's harddisk, but can also be played from the CD. No changes are made to autoexec.bat or config.sys. To hear sound and music you need a Sound Blaster compatible sound card, which means VOC file compatible.

We used NeoShow Professional for the DOS shows and they can be contacted for further software or operational information at: OSCS Software Development, Inc.
Tel: 503-389-5489.

To operate the "Remote Control" play the short introduction show covering that feature. But

some further information:

1. To have the shows loop-play continuously click the fast forward button as soon as the control panel appears. It will keep playing until you hit "ESC" on your keyboard or the "STOP" button on the control panel.
2. Once the show starts, click on the forward button and the show will play once without the control panel on the screen.

The MS-Windows shows may also play better from your harddisk. You can run them from the DOS prompt (providing you already have Windows 3.1 installed) by typing "WIN (NAME)", or by running them through the Windows File Manager. In Windows File Manager just double-click on the "Name.exe" file you wish to watch. They will run continuously until ESC is hit.

The multimedia shows were produced and tested on standard 386-25 PC's using 16-bit Hi-Color cards and Sound Blaster compatible sound cards. The DOS shows were made with 8-bit PCX files and 11K mono VOC sound files. The Windows shows were made with 8-bit TIF 5.0 files and 11K mono WAV files. We didn't have to re-set the DOS or Windows display modes even in our usual 800x600 16-bit Hi-Color display modes so it should not present a problem.

For SUN SPARC and Silicon Graphics IRIS users:

The multimedia shows will run on these UNIX flavors providing you obtain a software driver from COSA, The Company of Science & Art at 401-831-2672. These are the same show files found in the Macintosh section of this CD.

About the Photoimage files-

The photoimage files have been saved in 8-bit PICT Macintosh format and 8-bit PCX DOS format which works in nearly all Macintosh, MS-DOS, MS-Windows and UNIX software platforms we know of.

Software included on this CD-

For Macintosh folks we have Adobe Photoshop 2.0.1 Try-Out. This is a fully operational program but the print and save functions have been disabled by Adobe. We would like you to know that Adobe Photoshop Try-Out is the property of Adobe Systems, Inc. and cannot be sold or modified in any way.

For Windows folks we have included Paint Shop Pro. This is a fully functional Windows imaging program provided under the shareware system. If you like it and use it, please contact JASC, Inc. which owns the full rights to the software for more details. You can reach them at 612-934-7117. There is also a "Readme2.txt" file with the software we have included on this CD which tells you all about what you need to know. Write to them at: JASC, Inc. 17743 Evener Way, Eden Prairie, Minnesota 55346.

For DOS folks we have included NeoPaint. This is a fully functional DOS imaging program provided under the shareware. If you like and use it, please contact OSCS Software Development, Inc. at 503-389-5489. To write to them: 354 N.E. Greenwood Ave., Suite 108, Bend, OR. 97701. Read the "Readme.doc" files also for more information.

We are: Pacific CD, P.O. Box 31328, Honolulu, Hawaii 96820. ALOHA.
